GUIDE

The downloadable training file

All the evidence for a training programme in a single ZIP: download it and you are done.

1 What it is and what it is for

The **Group Dossier** builds a ZIP package with all the evidence for a training programme (the whole course, or one group): active time, communications with their full content, grades and assessment, the activity log and supporting evidence.

The live reports come from the plugins of the Training Evidence Pack (Training Evidence Report, Communications Report); the dossier covers the other half of the obligation: the **portable evidence file**. In Spain, for example, the rules of the FUNDAE® training scheme (formación bonificada) require the supporting documentation to be kept for **4 years**, even if the platform is no longer running. Once the dossier is downloaded, that evidence no longer depends on Moodle.

Guiding principle

The dossier **packages exactly the reports you already download by hand**: the time PDFs are produced by the Training Evidence Report and the communications PDFs by the Communications Report, with the same layout. What you see live is what gets archived, so there are no surprises in an audit.

What you will use it for

- Archiving the training file of each programme when you close it (course or group).
- Handing the employer the evidence for their students.
- Answering an audit request with the complete documentation.

2 Requirements and installation

- **Moodle 5.1, 5.2 or 5.3**.
- Optional (recommended): `local_efreport` for the time section and `local_efcomms` for communications and attachments. Without them, the dossier includes grades and the activity log (features of Moodle itself).

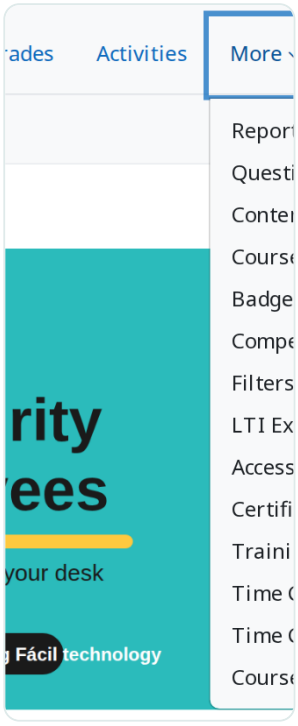

1. Install the zip from **Site administration → Plugins → Install plugins**.
2. Confirm the database upgrade.
3. Check the installation in **Site administration → Reports → System status**: the "Plugin file integrity" line must be OK.

Tip

If your hosting "loses" files when you install through the web installer, that check will tell you so, with the exact list. Reinstall from your hosting file manager and purge the caches.

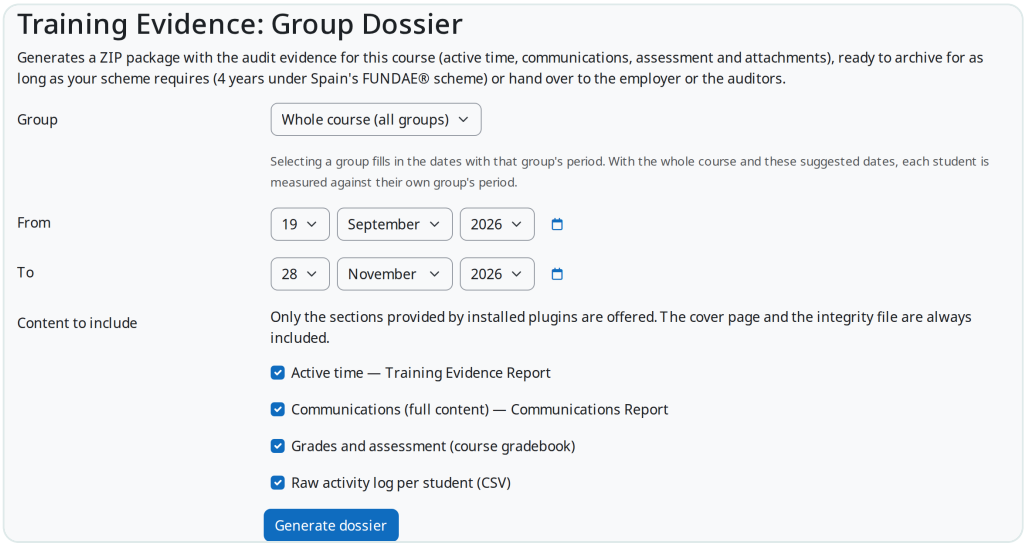

3 Generating a dossier

1 Go into the course and open the **More → Training Evidence: Group Dossier** menu entry.

The "Training Evidence: Group Dossier" entry is only shown to those who can generate it (managers).

2 Choose the **scope**: "Whole course (all groups)" or one group. Adjust the **date range** if you need to (by default the training period is proposed: the course's `fecha_inicio` and `fecha_final` custom fields, or its native course dates) and tick the **Content to include**.

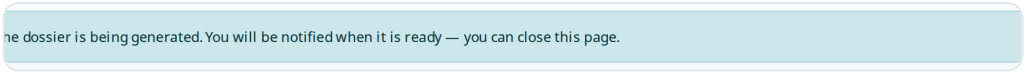

Only the sections provided by installed plugins are offered; the cover page and the integrity file are always included.

3. With **Per-group records** enabled in the Training Evidence Report, selecting a group fills in the dates with **that group's period**; if the group has no dates of its own, with the course dates. A note under the drop-down says where they come from, and you can change them by hand.

4. **Each student within their own period.** In a dossier for the **whole course** with the suggested dates, if the groups have different dates each student is measured against the period of **their group** (students with no group, or in several groups with different periods, use the dossier's period), just as in the on-screen reports. If you change the dates by hand, they apply to everyone. If the course measures by **enrolment dates** (the "Report period" course setting of the Training Evidence Report), each student is measured within their enrolment. The cover page and each student's record say which period was used.

5. Click **Generate dossier**. Generation runs **in the background**: it does not affect the platform's performance, even for a large course.

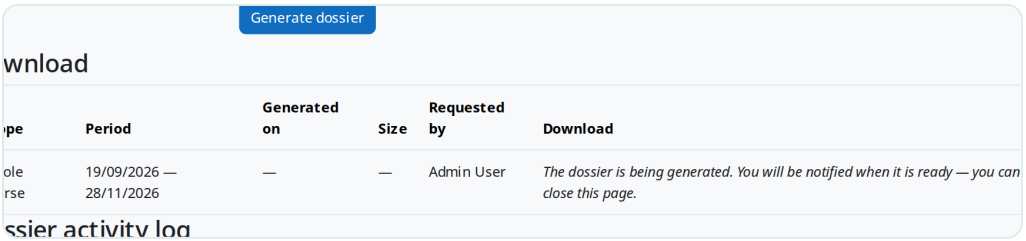

While it is being processed you can close the page: you will be notified through the notification bell (and by email) when it is ready.

Large courses
If the selection exceeds the configured threshold (240 students by default), you will see a notice, which does not block you, reminding you that it will take a while and that, if the course has groups, it is better to generate one dossier per group (which is also how a training programme is usually structured: groups of up to 80 students per tutor).

Who goes into the dossier
Everyone who is **enrolled in the course when it is generated** (active or suspended, whether they passed or not). Students who never accessed the course appear with their records at zero: that is evidence too (of non-participation). Someone who has already been unenrolled is not included.

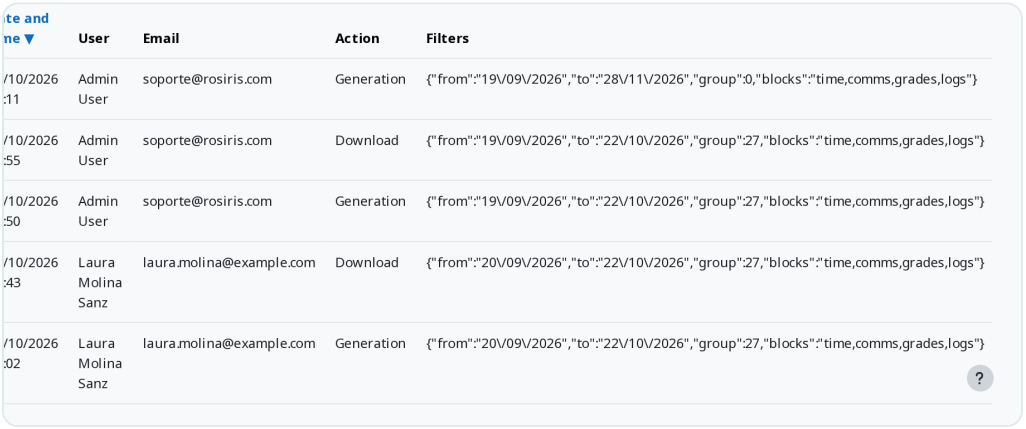

4 Downloading the dossier and the activity log

On the same page, the **Download** table shows the current dossier for each scope (whole course and each group):

One dossier per slot: the whole-course dossier and each group's dossier coexist.

Below it, the **Dossier activity log** records every generation and every download: who (with their email), when and with which filters. The dossier contains personal data (including the full text of messages), so this trail is your GDPR safeguard.

The log can be **filtered** (date, user, action), **sorted by date** (click the column header) and **downloaded as CSV or Excel** with the filters applied; long lists are paginated.

5 What the ZIP contains

The file name already tells the story: `dossier-{course}-{group|completo}-inicio{date}-gen{date-time}.zip`

File	Content
`00-indice.pdf`	Cover page: course, record details (file number, programme code, company tax ID; in a group dossier, that group's record), period, group, who generated it and when, the course-level reports and, grouped by student with their name and email, each student's files.
`integridad.txt`	SHA-256 fingerprint of every file plus the generation stamp (see section 6).
`tiempo-general-….pdf`	The actual PDF export of the Training Evidence Report (list plus each student's detail), filtered to the period and group.
`comunicaciones-general-….pdf`	The actual PDF export of the Communications Report list, filtered.
`calificaciones-….pdf`	Equivalent to the grader report: students × every grade item plus the course total.
`curso/` and `grupo/…/`	The course and group documents stored in the Training Evidence Report (teaching guide, tutor's CV, start notice, minutes…). A single-group dossier carries the course documents and that group's. They are always included, whichever content you tick. Requires local_efreport 2.31.1 or later.
`documentos-indice.csv`	Index of those documents: what each one belongs to, date, title, description, who uploaded it and when.
`Surname_Name_IDnumber/`	One folder per student, named with their name and ID number (or username if there is no ID number).

And inside each student's folder:

File	Content
tiempo-....pdf	The SAME PDF record you download from the live report: summary, detail by activity, BBB sessions and the index table of supporting evidence.
comunicaciones-....pdf	The actual communications PDF record (level 3, full content) with the index table of its supporting attachments.
evaluacion-....pdf	Equivalent to the grader's user report: ALL items (activities, manual grades and category totals) with grade, range, percentage and date, plus the submission metadata (the actual file is not included).
registro-....csv	Their raw activity log in the course (date and time, activity, action), filtered to the period. As CSV: it opens in Excel and stays readable for decades.
adjuntos/	Their attachments from BOTH sources: supporting communications (Communications Report) and supporting evidence (Training Evidence Report), with name clashes resolved.

Names with ID number

Every internal file carries the student's name and ID number: even if someone puts PDFs from several students into the same folder, nothing gets overwritten or mixed up.

6 Verifying integrity (SHA-256)

`integridad.txt` lists the SHA-256 fingerprint of every file in the dossier and the stamp of who generated it and when. It proves that no document was altered after it was generated.

1. Unzip the ZIP into a folder.
2. On Windows: open PowerShell in that folder and run `Get-FileHash -Algorithm SHA256 00-indice.pdf`. On Linux or Mac: `sha256sum 00-indice.pdf`.
3. Compare the result with the matching line in `integridad.txt`: they must match character for character.

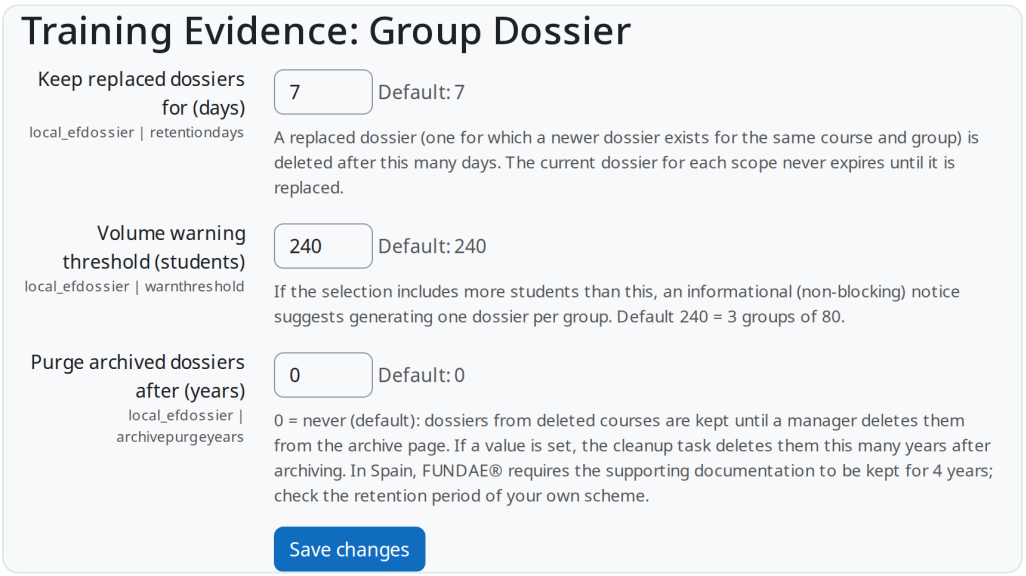

7 How many dossiers are kept (slots and retention)

So that storage does not grow out of control, the plugin keeps **the latest dossier for each "slot"** (the whole course and each group are separate slots). When you regenerate, the new one replaces the previous one, which is deleted automatically after a few days (7 by default).

> The downloaded dossier is yours
> The platform keeps only the latest dossier for each slot. The long-term archive (4 years in Spain) is made by **downloading** the ZIP and storing it where it belongs (document management system, training file folder...). Do not rely on it staying in Moodle.

8 Plugin settings

In **Site administration → Plugins → Training Evidence: Group Dossier**:

Retention of replaced dossiers and the volume warning threshold.

REFERENCE

Permissions, backups and questions

9 Permissions: managers yes, auditors no

Capability	Who has it by default	What it allows
`local/efdossier:generate`	Only **Manager**	View the page, generate and download the dossier.

The **auditor does not have this permission** (and does not see the link): they consult the live reports with their read-only role. The dossier is the manager's archiving tool. It contains the full text of messages, which is why access to it is restricted and audited. If you use the auditor role preset shipped with the Training Evidence Report plugin (`local_efreport` 2.49.1 or later: `roles/inspectorfundae_en.xml` , role "Auditor"), it is already set up this way.

10 Course backups

Data	Included in the backup (.mbz)?
Dossier activity log (generations and downloads)	**Yes, with "Include course logs"**
The generated ZIPs	**No (they can be regenerated and are heavy: generate them again on the destination site)**
The job queue	**No (operational state)**

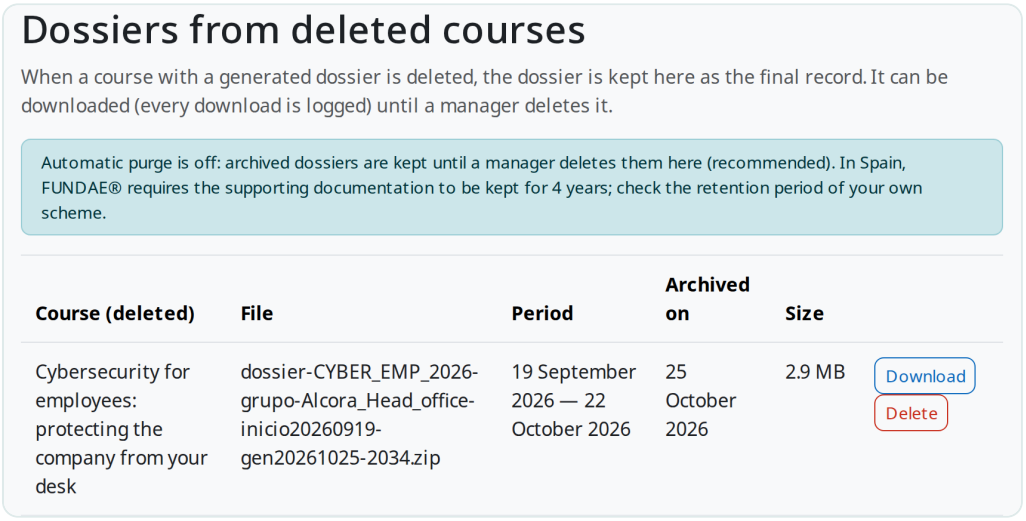

TWO WARNINGS (MOODLE BEHAVIOUR)

· If you restore **into an existing course**, tick **"Overwrite course configuration"**: otherwise Moodle skips the step that brings in the dossier activity log.
· **Resetting** a course (to reuse it) removes the generated ZIPs along with the rest of the course files: those dossiers disappear from the list (they are not archived; download them first if you need them). Dossiers from **deleted** courses are archived (next section).

11 If the course is deleted: the dossier archive

Since version 0.3.0, if a course that had a generated dossier is **deleted**, the dossier **is not lost**: it is archived automatically and stays available in **Site administration → Plugins → Dossiers from deleted courses** (visible to

managers; capability `local/efdossier:managearchive`). It is the course's final record: the retention period of your scheme (4 years under Spain's FUNDAE® scheme) relies on it.

The archive: course, file, period, archiving date and actions. Once 4 years have passed since archiving, the row shows the "4 years or more" label.

- **Only the current dossier** of each slot survives: replaced ones, pending ones and the rest of the plugin's data are deleted with the course (as in the whole suite).
- Every **download from the archive is logged** (proof of receipt), just as in the course.
- **Deleting from the archive is permanent**: it removes the file and its audit trail, after asking for confirmation.
- **Optional automatic purge**: in the plugin settings you can set archived dossiers to be deleted automatically after N years. It comes **disabled** (0 = never) and is best left that way unless the client has a clear policy.

> **THE PRIOR WARNING IS STILL YOUR FRIEND**
>
> When you delete a course with data, the platform warns you (a notice from efreport/efcomms) so that you generate the dossier FIRST. The archive saves a dossier that was already generated; what was never generated cannot be archived.

12 Other eLearning Fácil plugins

The dossier is sold on its own and is also part of the **Training Evidence Pack**: it collects what the other plugins measure and record. This is the family of eLearning Fácil plugins that work the same way, together or on their own:

Training Evidence Pack

Training evidence, ready for an audit. Training Evidence Report with a reliable clock (inactivity, period, 75% assessments), a report on communications with the tutor, a group dossier in a ZIP you can keep for as long as your scheme requires (4 years under Spain's FUNDAE® scheme), a block with links to the reports, and access to activities by active time. With a group record for several programmes or companies in one course.
elearningfacil.com/pack-fundae-moodle

Also in the Pack

Training Evidence: Automatic Alerts (`local_efalerts`) for the student and the tutor (not started, drop-out, final stretch, assessments, certificate deadline); **Training Evidence: Course Ready Check** (`local_efready`), which checks the course meets the requirements before it starts; and **Training Evidence: My Progress** (`block_efprogress` , free), the block where each student sees their time and what is left.

Class Manager

Sell courses by seat and rent out classrooms on your Moodle. Your client enrols their own students from their course; you set the seats and the access period, and each student gets their access by email without anyone sending it by hand.
elearningfacil.com/alquila-moodle-por-aulas-plugin

Bulk Certificate Manager

Issue and download a course's certificates in one go (Workplace and Custom certificate), with filters for who qualifies, and keep a record of delivery.

Training Evidence: Time Clock (free)

Measures each student's real active time in the course. It is the way in: if you install the Pack later, everything measured is kept.

Find out more

They all work the same way, together or on their own. You can see them, try them and request them at **elearningfacil.com** · **info@elearningfacil.com**.

13 Frequently asked questions

How often should I generate the dossier?

The natural moment is when you **close the training programme** (or the group), once no more data will come in, and then archive it. You can regenerate it if something changed afterwards (for example, after certifying a BBB session): the new one replaces the previous one.

Why is the student's log a CSV rather than an Excel file?

Because it is plain text: it takes up less space in the ZIP, it opens in Excel just the same, and it will still be readable many years from now without depending on software versions. For a long-term evidence file (4 years in Spain), it is the right format.

Can I include the files the students submitted?

No: the size would be unmanageable. The dossier carries the **metadata** of each submission (file name and date), which proves the submission existed; the files stay in the course.

I generated the dossier but I cannot see the students from other groups

If the course uses **separate groups** and your account does not have the "Access all groups" capability, the dossier respects that restriction: you can only generate and download the dossier of your own groups, and the page shows you only their dossiers and their activity log. That is the expected behaviour in multi-company courses.

Guide for the **local_efdossier** plugin · version 0.7.3 · © 2026 eLearning Fácil · https://elearningfacil.com · Works with Moodle 5.1 to 5.3. The file names inside the ZIP are fixed by design (in Spanish) because the dossier is addressed to the employer or the audit authorities in Spain.
