PART 1

# Quick start

The essentials to have the plugin up and running in a few minutes.

## What it is and what it is for

It measures each student's **real active time** in the course activities and presents it in an **exportable report** (PDF, Excel and CSV), built for **any training that has to be proven**: ready for Spain's FUNDAE® training scheme (*formación bonificada*) and for any grant, client or compliance audit.

- A floating clock that counts time while the tab is **visible and in the foreground**.
- A report with student details, visits, time, completion % and grades.
- Direct links to Moodle's **Logs** and **Grader report**.

## Minimum requirements

- **Moodle 5.1 to 5.3**, with administrator rights to install plugins.
- A user profile field for the national ID number (DNI/NIF in Spain); by default `dni`, it is **not case-sensitive** and is **configurable**. Plus the course fields `fecha_inicio` / `fecha_final` (start and end date, see Part 2).
- **The site timezone set to your own** (for Spain, `Europe/Madrid`). This is essential for dates to match.

## Install in 3 steps

1. In **Site administration → Plugins → Install plugins**, upload the file `local_efreport_vX.zip`.
2. Click **Install** and, on the database upgrade screen, **Continue**.
3. Done: the plugin is active. In the plugin list it shows as **"Training Evidence: Time, Activity & Evaluation Report"** and it appears in the menu of every course as **"Training Management"**.

## Minimum setup and your first report

1. Create the **custom fields** (once) and set the **site timezone** (Part 2).
2. Leave the mode on **"Measure and show the clock"** and the scope on **"Activities and course page"**.
3. Go into a course as a **teacher/manager** → course menu → **"Training Management"** → **"Training Evidence Report settings"** to adjust anything you need.

4 Open the report from the same page: filters at the top, the student table and the **PDF / Excel / CSV** buttons.

## 3 key tips to get started

**RECOMMENDED**

Set the **site timezone to your own** (for Spain, Europe/Madrid). Otherwise, course and report dates can show **one day off**.

**TIP**

Fill in the **start and end date** in the course fields: the report uses that period **by default**, so you don't have to filter by hand. Leave the end date empty for an "open course".

**WATCH OUT**

The clock is only shown to **enrolled students**. As an administrator or teacher you **won't see it**. That is on purpose: your time is not measured.

PART 2

# Full guide

Every detail on use, settings and things to keep in mind.

## 1 What the plugin does in detail

The plugin records each student's **active time**: it only adds time while the activity page is **visible and in focus**. If the student switches tabs, minimises the window or moves to another app, the clock **pauses**. That time builds up per activity and per course.

### For the student

An optional **floating clock** shows their time, and a **consent notice (GDPR)** appears the first time. There is nothing for them to set up.

### For the teacher / manager

A **report** with all the course data, filters, a breakdown per student and **export to PDF, Excel and CSV** for the audit.

## 2 Requirements and custom fields

The report shows the **course custom fields** and the student's **ID number**. You create them once. These are the ones we recommend for audited training (FUNDAE® in Spain):

### Course custom fields — "General course data"

| Field | Short name | Type | Locked |
|---|---|---|---|
| Training provider | centro_formacion | Short text | Yes |
| Tax ID (CIF in Spain) | cif | Short text | Yes |
| Tutor | tutor | Short text | Yes |
| Start date | fecha_inicio | Date and time | Yes |
| End date | fecha_final | Date and time | Yes |
| Duration in hours | duracion | Number | Yes |

### Course custom fields — "Training action identification"

| Field | Short name | Type | Locked |
|---|---|---|---|
| File no. | `expediente` | Short text | Yes |
| Access | `acceso` | Short text | Yes |
| Training action no. | `aaff` | Short text | Yes |
| Training action title | `denominacion_aaff` | Short text | Yes |
| Delivery mode | `modalidad` | Dropdown menu | Yes |

### User profile field (ID number)

| Field | Short name | Type | Locked |
|---|---|---|---|
| ID number / passport | `dni` (default) | Short text | **No** |

**THE ID FIELD IS FLEXIBLE**

The short name doesn't have to be exactly `dni`:

- **Not case-sensitive:** `dni`, `DNI` or `Dni` all work the same.
- **Configurable:** if your site uses another name (`nif`, `documento`...), enter it in the site setting **"ID number profile field"** (see §4). **No need to rename** or touch the field your students already have, so no data is lost.

**VERY IMPORTANT**

- All **course** fields must be **locked** (only the manager/admin changes them).
- The **ID number** user field must **not** be locked (each student fills in their own).

**SEVERAL ACTIONS OR COMPANIES IN ONE COURSE?**

Each one can go in its own group with its own sheet: see **§15 Group record**.

**WHY DATES MATTER**

The report takes its **period** from `fecha_inicio` / `fecha_final`. If they are empty, it uses the course's own dates; if those are empty too, it shows "all data" with a notice.

# 3 Installation (web, manual and CLI)

## Method 1 — Web interface (recommended)

1. **Site administration → Plugins → Install plugins**.
2. Drag the plugin ZIP in and click **Install plugin from the ZIP file**.
3. Confirm and **upgrade the database** when prompted.

## Method 2 — Manual file copy

1. Unzip the file and copy the `efreport` folder into `moodle/local/` (in Moodle 5.x, `public/local/`).
2. Go to **Site administration → Notifications** and follow the wizard.

## Method 3 — Command line

Copy the folder and run:

```
php admin/cli/upgrade.php
```

**TIP**

After installing or changing language packs, run `php admin/cli/purge_caches.php` so everything shows up to date.

**UNINSTALLING**

If you have the **Training Evidence: Time Restriction** plugin ( `availability_eftime` ; in versions before the new name it is listed as "Restriction by dedicated time") installed, Moodle **won't let you uninstall** this report while that plugin is present (it needs the report to measure time): the plugin list shows "*Required by: availability_eftime*" and there is no uninstall option. To remove the report, **uninstall Training Evidence: Time Restriction ( `availability_eftime` ) first**.

**COMING FROM THE FREE TIME CLOCK?**

If the site already used **Training Evidence: Time Clock (free)** ( `local_eftimeclock` ), installing or upgrading the Training Evidence Pack, plugins for Moodle™, **automatically** imports all the time already measured (with no duplicates) and the course settings (clock off and clock theme). The administrator gets a notice when it finishes and can then **uninstall the free plugin**: not a single second is lost.

# 4 Site settings (administrator)

Go to **Site administration → Plugins → Local plugins → "Training Evidence: Time, Activity & Evaluation Report"**. Each course can override these values.

| Setting | What it does | Recommendation |
|---|---|---|
| **Default tracking mode** | Measure and show the clock / measure without showing the clock / do not measure. | Measure and show the clock. |
| **Default scope** | Where time is counted: activities only / activities and course page / any page in the course. | Activities and course page. |
| **Report title** | Heading of the report and its exports. | "Training Evidence Report" by default; put your own brand or the wording your auditor expects (for example "Informe de formación bonificada" in Spain). |
| **ID number profile field** | Short name of the user field holding the ID number (not case-sensitive). | `dni` by default; change it if your site uses another one ( `nif` , `documento` …). |
| **Count in background** | Activity types that keep counting in another window. Only these are offered: **URL, File, External tool (LTI) and SCORM**. | Tick only the ones that open in a separate window (see §7). |
| **Background time cap per activity (minutes)** | Maximum minutes counted in the background. | 90 min by default. |
| **Show the time-tracking notice** | Shows the student a notice (GDPR) the first time. | On. |
| **Profile fields** | Which student profile fields appear as a filter, as a column, and which ones the auditor sees (see §8). | None, unless you need them to search. |
| **Per-group records** | Each group shows its own sheet (see §15). | Off, unless you use one group per action or company. |
| **Read the quality survey activity** | Column and filters for the FUNDAE® quality survey: received and returned (see §18). | Off until you have the survey as a course activity. |
| **Short names for dates and duration** | Which custom fields hold the start, the end and the duration. | The usual ones: `fecha_inicio` , `fecha_final` , `duracion` . |
| **Data retention (days)** | Days after which old sessions are deleted. | 0 = never delete, if you need the history. |

**WHERE EVERYTHING IS: "TRAINING MANAGEMENT"**

In the course menu, under "More", the suite adds a single entry, **"Training Management"**. It is a page with one card per tool, grouped and explained: you only see the ones you can use. The report is also in the course "Reports" tab. In the site settings → Course menu you can rename the entry and add a direct link to the report in the menu.

## 5 Course settings

Inside the course, open **"Training Management"** in the course menu and choose **"Training Evidence Report settings"**. It lets you **override** the mode, the scope and the background settings, and set a **report title of its own** for that course (handy if a client wants a different name).

**TIP**

If you tick **"Use site defaults"**, the course inherits the site settings. Untick it only to customise that particular course.

**WHAT APPLIES RIGHT NOW?**

Each block of the course settings has the "Use the site settings" checkbox and, below it, "Now on the site: …" with the values currently being applied. Untick it only to change something in that course.

### Report period: course or enrolment new

In **"Report period"** you choose how time is bounded in this course:

- **Course or group dates**, as always: the filter is filled with the course start and end dates or, with the group record, with each group's dates (§15).
- **Enrolment dates of each student**, for **open-enrolment** courses: each student is measured over the time their enrolment is active. The list adds the **"Enrolment period"** column and the filter summary says so. If you pick dates by hand in the filter, they are intersected with each enrolment.

**INCONSISTENT ENROLMENT**

If a student has several active enrolments that never overlap, the report counts no time for them and shows "inconsistent enrolment: check its dates". Fix their enrolment dates in Participants.

## 6 The student experience

- **Floating clock** (if the mode is "show"): the student sees their time live.
- **GDPR notice**: the first time, a message tells them their time is being recorded; they accept it once.
- The clock **pauses** when they switch tabs, minimise the window or move to another app.

## 7 Measuring time properly key

Most questions come from activities that **open their content outside Moodle** (URL, SCORM, files). Only these **four types** can keep counting in the background, because they are the ones Moodle detects when they open in another window: **URL, File, External tool (LTI) and SCORM**. Here is the rule:

### Content inside Moodle

Forums, pages, quizzes, or a URL set to **"Embed"**. Time is counted by **focus** and **pauses** when the student leaves. **Don't tick** that type under background counting.

### Content in a separate window

A URL set to **"In pop-up"**, a **SCORM** package in a new window, or an **External tool (LTI)**. For time to count while the student is away, **tick that type** in "Activities that keep counting in another window".

#### CONTENT THAT OPENS IN A NEW WINDOW?

If an activity opens its content in a **new window or tab** (a URL "In pop-up", a file or an external tool), tick that **type** for background counting and it will count while the window stays open. The plugin measures by **activity type** and by the window being open, not by the specific tool inside it.

#### GOLDEN RULE

Tick a type for **background counting only if ALL** its activities open in a separate window. If you embed them inside Moodle, leave it **unticked** so the clock pauses properly and has a natural cap.

#### MIXING BOTH IN ONE COURSE

Some URLs embedded and others in a pop-up? Use **"Page"** for the embedded ones (unticked) and **"URL"** for the pop-up ones (ticked). That way each one is measured as it should be.

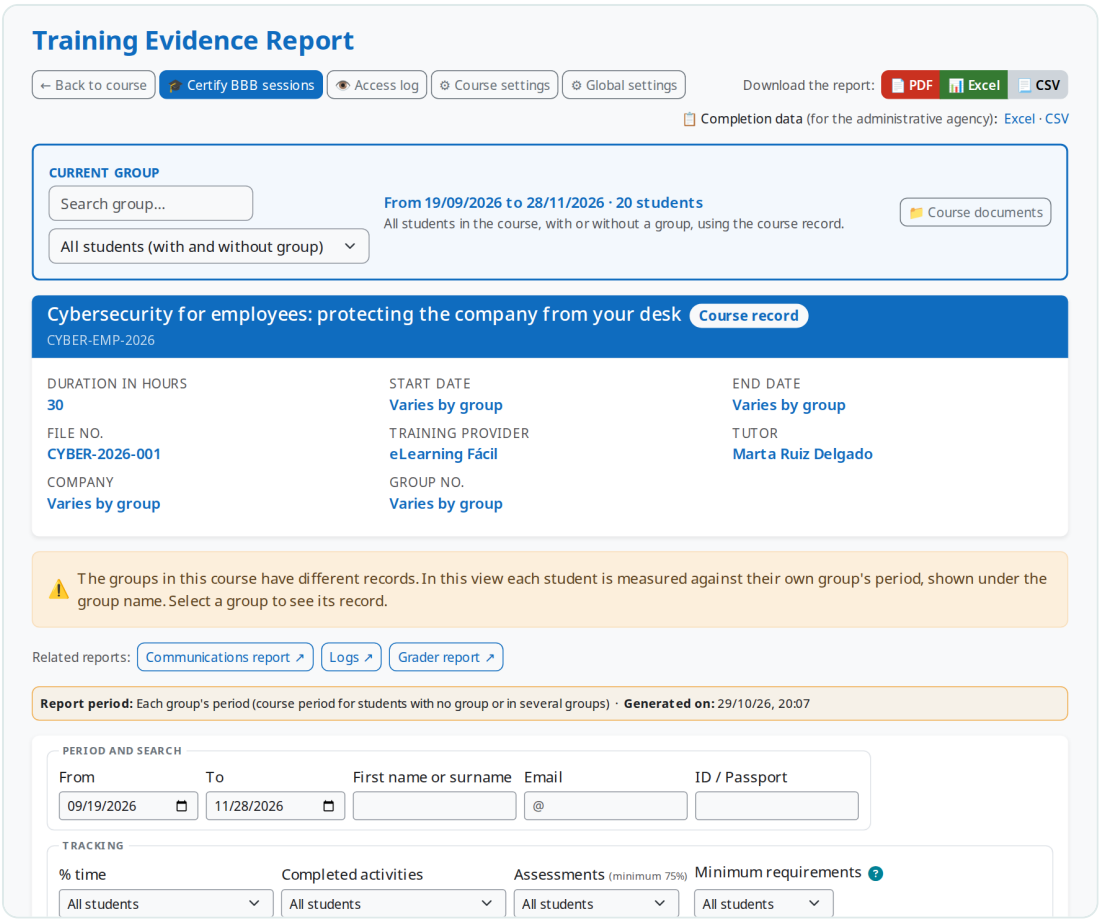

#### FOR AUDITS

In the background the plugin cannot know what the student is doing outside Moodle: that is why the **90-minute cap** exists. Keep it, so certifiable time is not inflated.

#### NOT COMPATIBLE WITH COURSE FORMATS THAT USE MODAL WINDOWS (E.G. TILES)

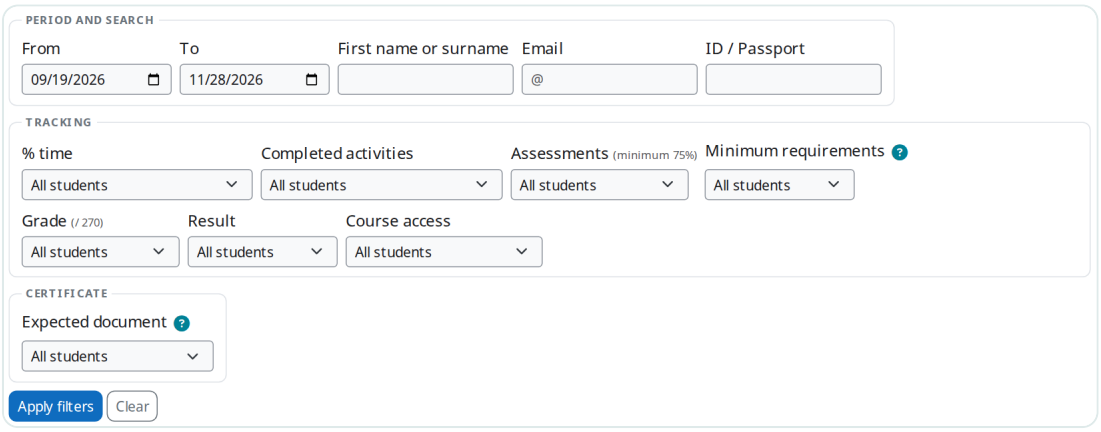

Course formats such as **Tiles** (format_tiles) can open activities inside a **modal window** instead of going to their page. The plugin measures time by the **activity page** (its module context); if that page is never really loaded, time keeps being counted on the **course page** and is split wrongly between activities. **Solution:** if you use Tiles, turn off modal windows in **Site administration → Plugins → Course formats → Tiles** (a setting of the course format plugin itself, not of efreport). With modals off, Tiles goes to each activity normally and time is assigned correctly.

# 8 The report step by step

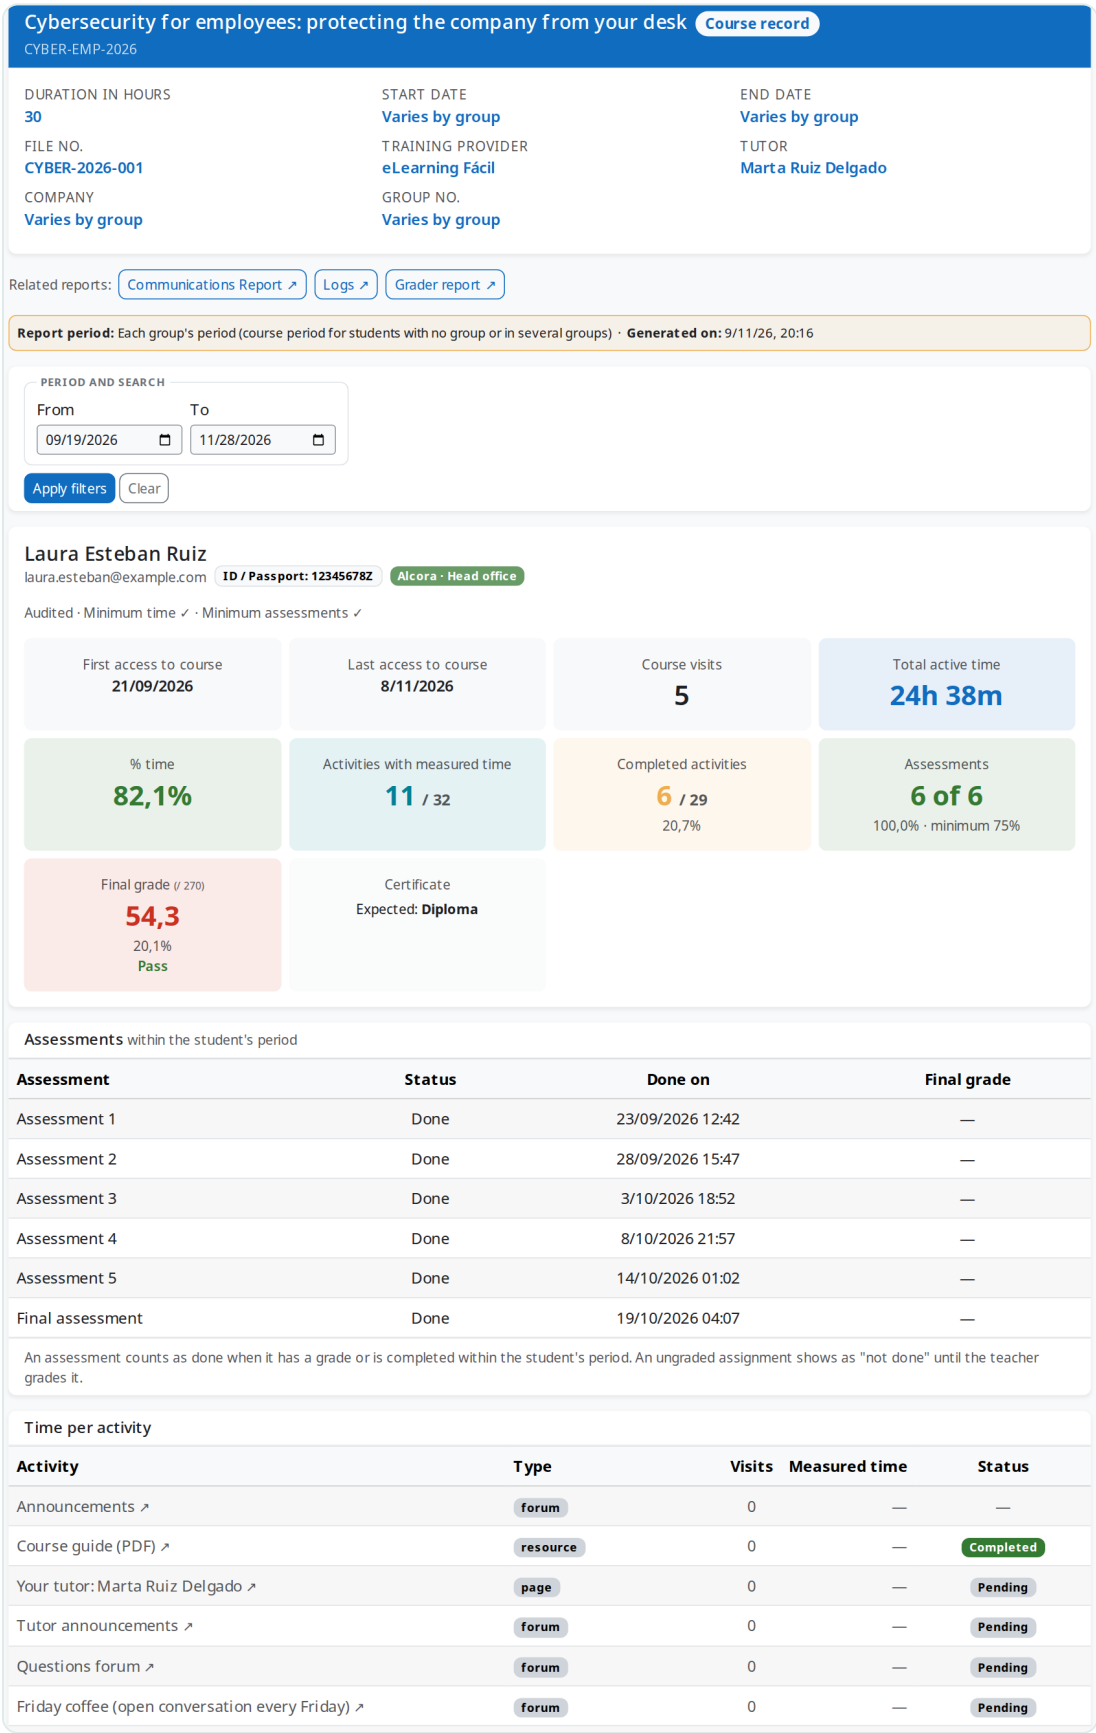

One row per student (visits, time spent, completion, grade); filters and export to PDF/Excel/CSV at the top.

- **Filters** (at the top), in three blocks: **Period and search** (dates, group, first name or surname, email and ID number), **Tracking** (time %, activities, assessments, requirements, grade, result and access) and **Profile fields**. Only the filters the course can use are shown.
- **Default period**: it comes pre-filled with the course dates. Clear it and apply to see “all data”.
- **Columns**: first and last access, visits, active time with its % below, activities completed with their % below, assessments, grade and result. Click a column heading to sort, including first and last access.
- **Student breakdown**: click “View” to see the breakdown per activity.

The filters, in three blocks. “First name or surname” is a text search: it works just as well with 20 students as with 500.

The breakdown (“View”): the student’s total time and the split per activity.

- **Export**: **PDF**, **Excel** and **CSV** buttons (they follow the filters you applied).
- The **Excel** file has one sheet with the list and one sheet per student with their breakdown. With **more than 50 students** listed, the breakdown goes into a single “Time per activity” sheet (student, group,

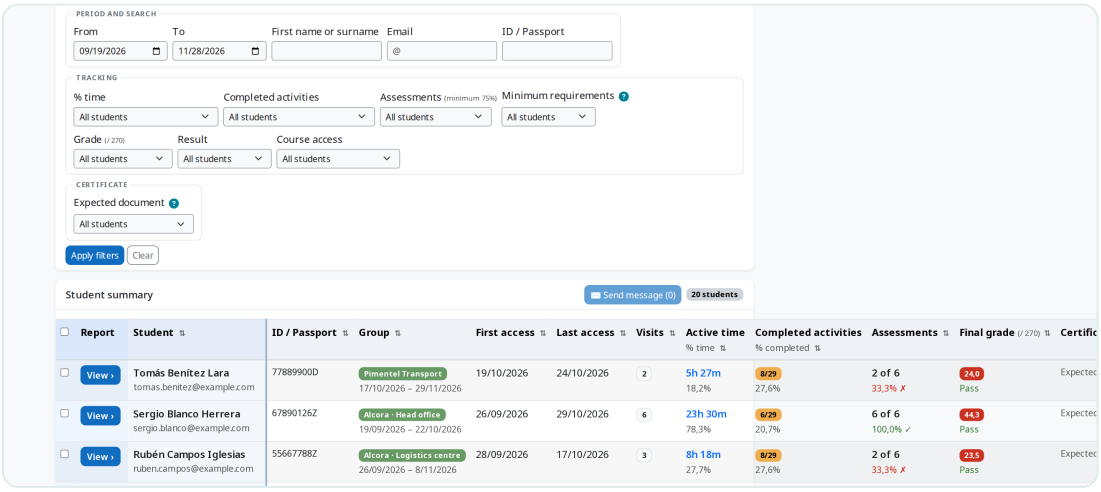

activity, type, visits and time), generated in a couple of seconds. The **PDF** of a very large course, with every student's sheet, can take half a minute: that is what the dossier is for, as it prepares it in the background.

- **Related reports**: links to **Logs** and the **Grader report**.

## Profile fields as filters and columns new

If your students have profile fields of their own, such as their workplace or a purchase order number, you can use them in the report. In the site settings, block **"Profile fields in the report"**, choose which ones appear **as filters**, which **as columns** and which ones **the auditor sees**. None is ticked by default, and each course can change the selection in its own settings.

The same lists also include the **standard Moodle fields**, marked "(Moodle field)": ID number, institution, department, city, country, phone numbers and the profile description (as plain text). You can mix them with custom ones; columns appear in list order: custom fields first (in their Moodle order), then the standard ones. Country is shown by name and can be filtered by name or by code ("Spa", or an exact "es").

Filtering by "Workplace: South Workshop": only those students remain, with their profile columns. The active filter shows in the summary at the top and in the exports.

- **Menu** fields appear as a drop-down list; **checkboxes** as yes or no; everything else as a text **search**.
- Fields you don't mark as **"Profile fields the auditor sees"** are only visible to the manager and the teacher, on screen and in the exports; the auditor can't filter by them either.
- Whoever is looking (auditor, teacher or manager), the report **never shows a field that Moodle itself would hide from them** in the course, even if it is on the list. ID number, institution, department and phone numbers follow the same rule as the participants page: the field must be in **"Show user identity"** (Site administration → Users → Permissions → User policies) and the viewer must have the `moodle/site:viewuseridentity` capability (teachers and the preset Auditor role have it); the manager always sees ID number, institution and department. City, country and description follow "Hide user fields"; a custom field follows its own visibility (a private or hidden one is only seen by the manager). **In practice**: if you want the auditor or the teacher to see the institution, tick it in "Show user identity".
- The chosen columns go into **every export**: in Excel and CSV, one column each; in the PDF, in the small line under each student's name.
- A profile filter is for **searching**, not for separating companies: use groups for that (§15).

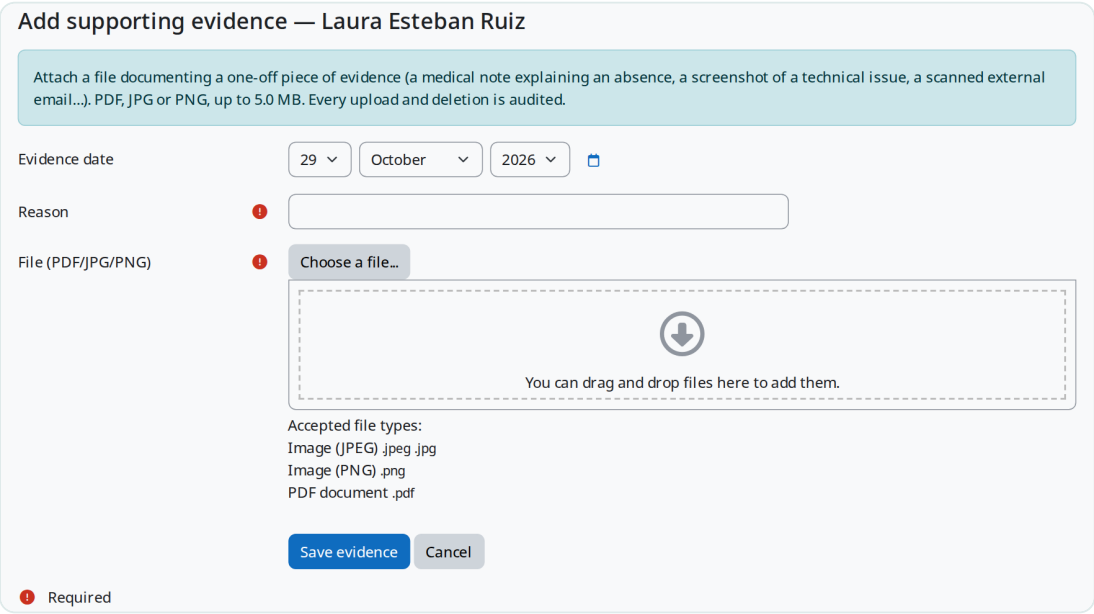

- The profile stores the **current** value: if a student moves to another workplace, the report shows the new one in older courses too.

## Supporting evidence for a student new

On each student's sheet, managers and teachers can attach **one-off evidence** that explains their time: the doctor's note for two weeks offline, a screenshot of a technical incident, a scanned external email…

The section on the sheet: date, reason, file (with a link), who uploaded it, and the button to add more. Every upload and deletion is **audited**.

**PDF, JPG and PNG** are accepted (a phone photo of the note works as it is), with a configurable size limit (5 MB by default). The file is renamed to `{date}-{reason}` so it can be identified on its own.

- The **PDF sheet** includes an index table of the material (date · reason · file), and the **dossier** (local_efdossier) collects it in the student's `adjuntos/` folder.
- **Assignment submissions are NOT uploaded again here**: they already live in their activity, and duplicating them would be confusing in an audit. This is only for things that have nowhere else to go.
- It travels in backups with "Include enrolled users" (its audit trail, with "Include course logs").

### DATES IN THE REPORT

The **period** filters time, visits and completions. **First and last access** always show the real date (not bounded by the period).

# 9 BBB module: live classes new

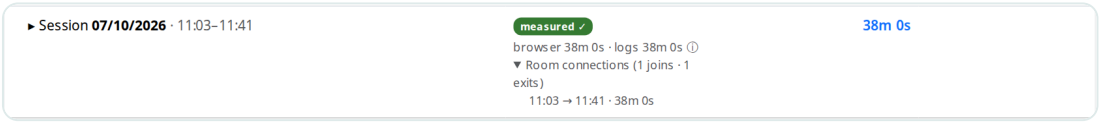

If your training includes **live classes with BigBlueButton**, this module measures their time in a reliable, auditable way. It is **off by default**: until the administrator turns it on, nothing about BBB appears on any screen.

## How it measures (hybrid rule: “the reliable source wins”)

Each session has **two witnesses**: the student’s **browser** (the activity’s Moodle tab, which keeps counting in the background while it is open, with a cap per session) and the server **logs** (the real **join → leave** intervals in the room). The rule, per session:

- **There is a certification** → the certification counts.
- **Clean logs** (every join has its leave) → the **lower** of the two witnesses counts. Time cannot be inflated.
- **Incomplete logs** (a join without a leave, typical of the **phone** “back” gesture, which generates no leave event) → the logs are discarded as a witness and the **browser** counts (with its cap). That way a student on a phone doesn’t lose legitimate time.
- **No usable measurement** → the session is **pending certification**.

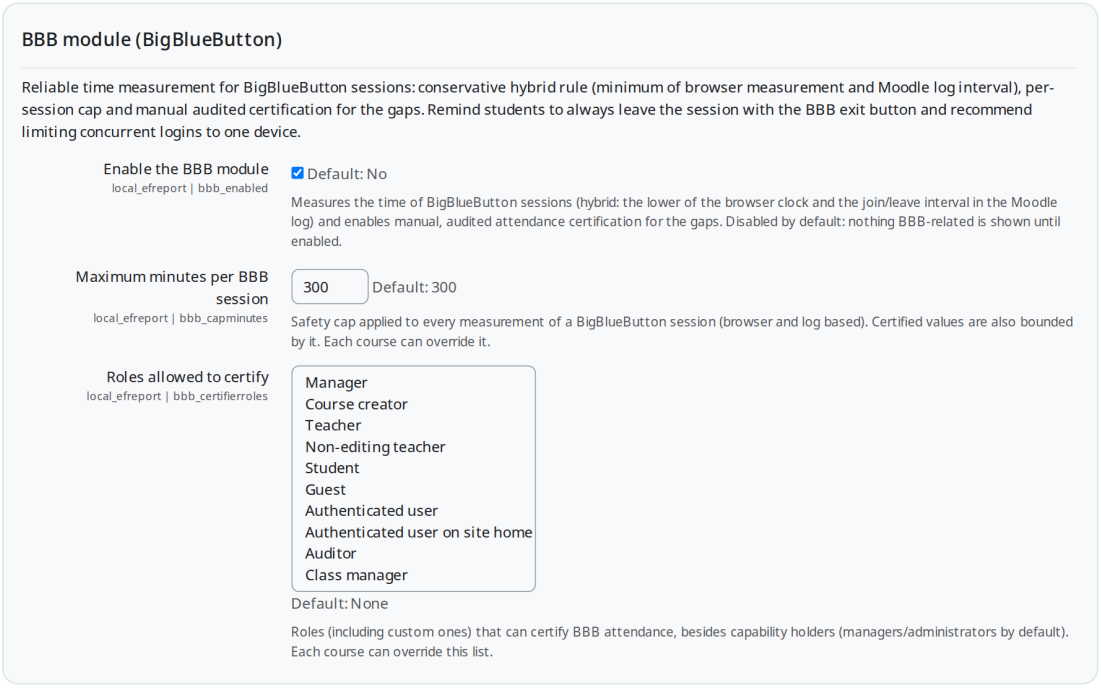

## Seeing the sources and connections (only for those who certify)

Under each session, whoever can certify sees **both raw sources** (“browser 4m 27s · logs 1m 43s”), the ⚠ **incomplete logs** warning when it applies, the ⓘ legend and the **“Room connections”** drop-down with each join→leave interval. The **auditor** sees a single clean number: the effective one under the rule.

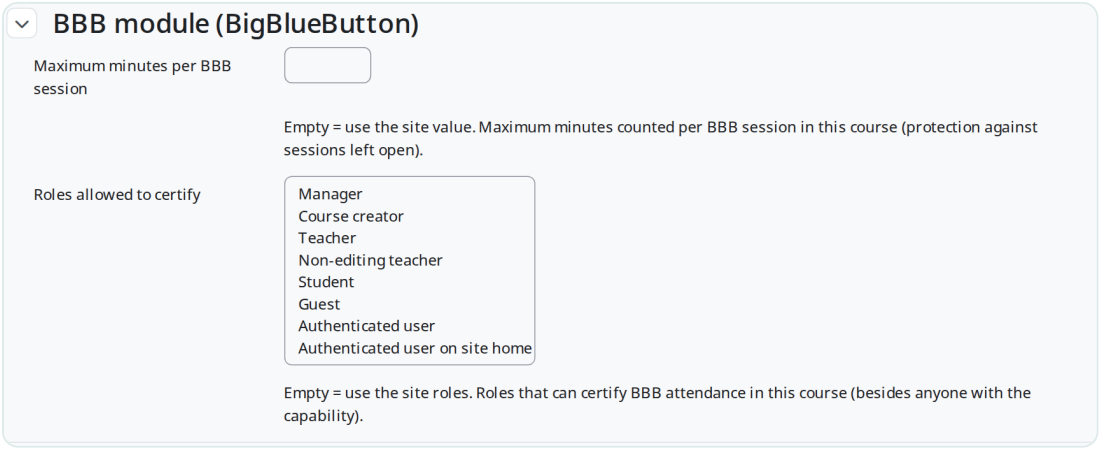

> **THE BROWSER SHOWS MUCH MORE THAN THE LOGS?**
>
> It means the activity’s **Moodle tab** stayed open longer than the student spent in the room. With clean logs that’s fine: the lower one counts. The drop-down tells you exactly what happened before you certify.

## Turning it on (administrator)

Site settings → local_efreport → "BBB module (BigBlueButton)" section: tick **Enable the BBB module**, check the **cap per session** (300 min by default) and choose which **roles can certify** besides the manager.

## Course settings (optional)

In the **course report settings** you can override the cap per session (empty = use the site value) and the certifying roles **for that course only**, for example to let the teacher certify in a specific course.

## The report: sessions by date

| Assessment 5 ↗ | quiz | 0 | — | Completed |
| Lesson 6: Personal data and what to do when something goes wrong ↗ | book | 0 | 1h 41m | Completed by time |

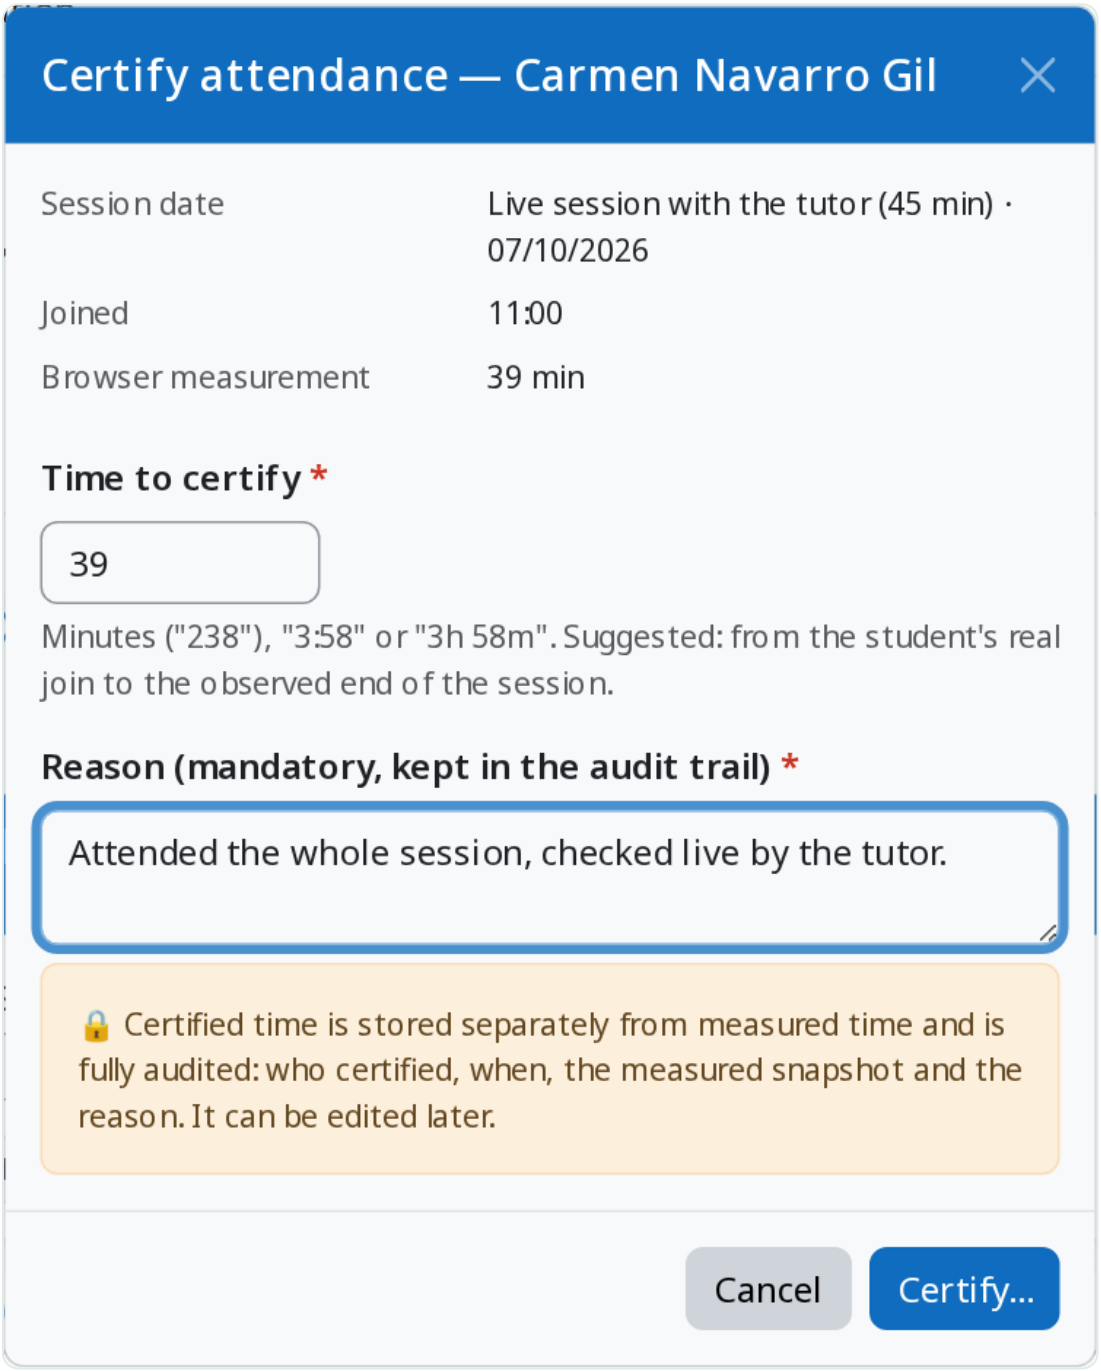

In the student breakdown, the BBB activity is split into **sessions by date** with their observed times and a tag: **measured** ✓ (automatic), **certified** (with author, date and reason) or **pending** (only visible to those who can certify; the auditor sees a clean report).

## Certifying attendance (to fill the gaps)

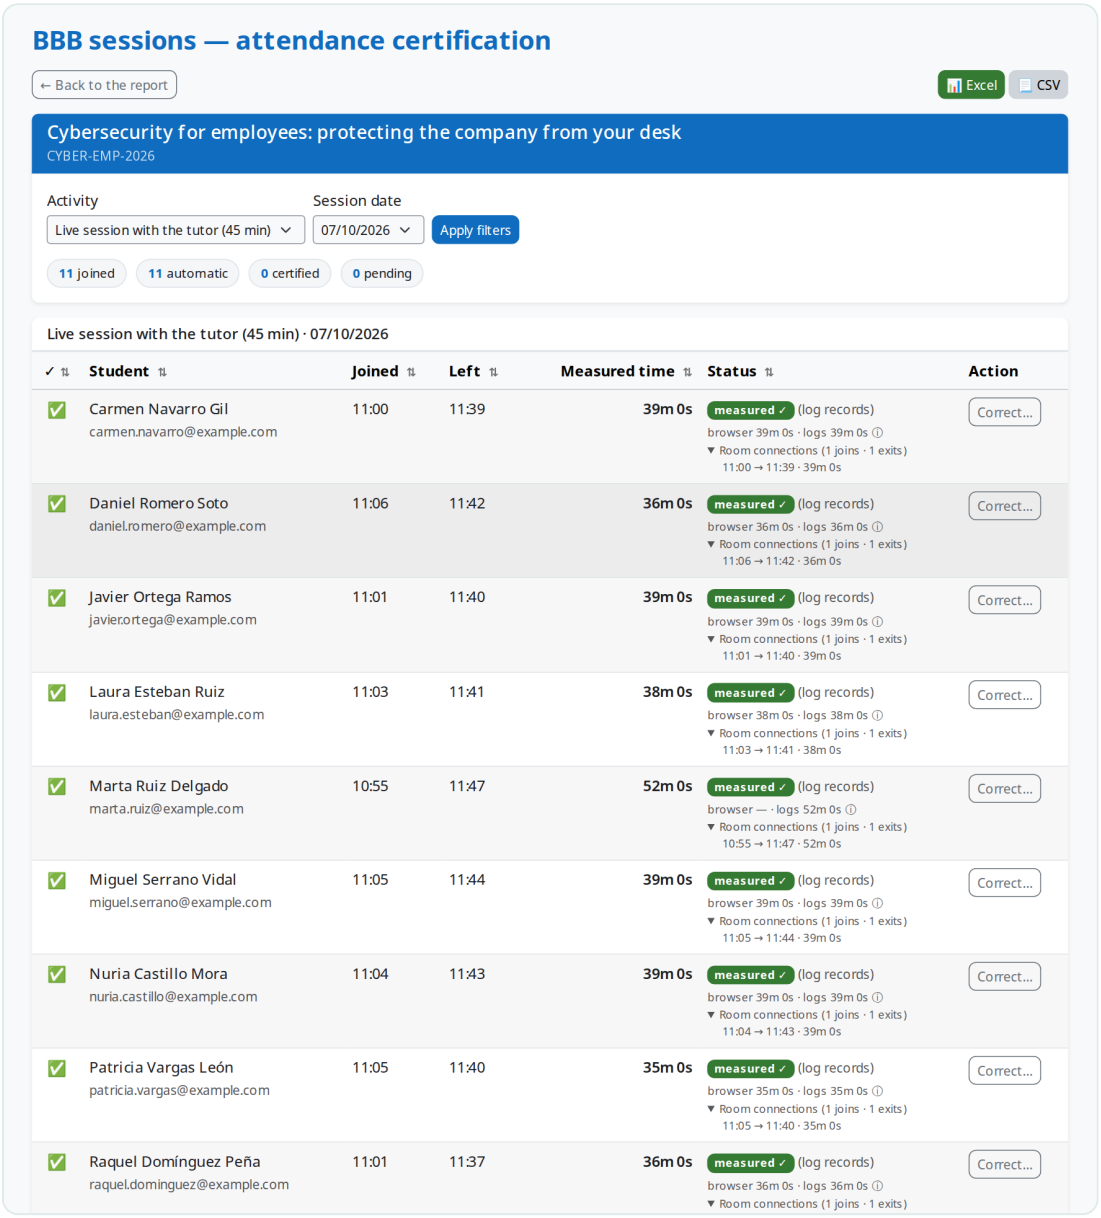

When a student **joined but neither their leave nor a usable measurement was recorded** (typical on phones), the manager can **certify** their attendance. Click the **"Certify BBB sessions"** button in the report (it shows the pending ones) and work session by session:

All the students in the session at a glance: **resolved** and ☐ **pending** (the checkbox also selects them to certify **in bulk** with a single reason). Sortable columns and CSV/Excel export.

The dialog shows what was observed (join, browser measurement) and suggests the time from when the student **actually joined** to the **observed end** of the session. The **reason is mandatory** and everything is audited (who, when, original measurement and reason); it can be edited later.

The certification screen shows **the sources and the connection breakdown** for each student: the full picture is right where the decision is signed off.

### AUDIT-PROOF

Certified time is stored **apart** from measured time, with a snapshot of what had been measured, and every new entry or edit is also written to Moodle's **event log**. In the report, certified time is always distinguished from measured time.

## Tips for your students (pass them on!)

> **"ALWAYS LEAVE WITH THE BIGBLUEBUTTON LEAVE BUTTON"**
>
> If the student just closes the window, their leave may not be recorded (especially on a **phone**) and the session will be left pending certification. Leaving with the button, Moodle records the leave and the time is exact.

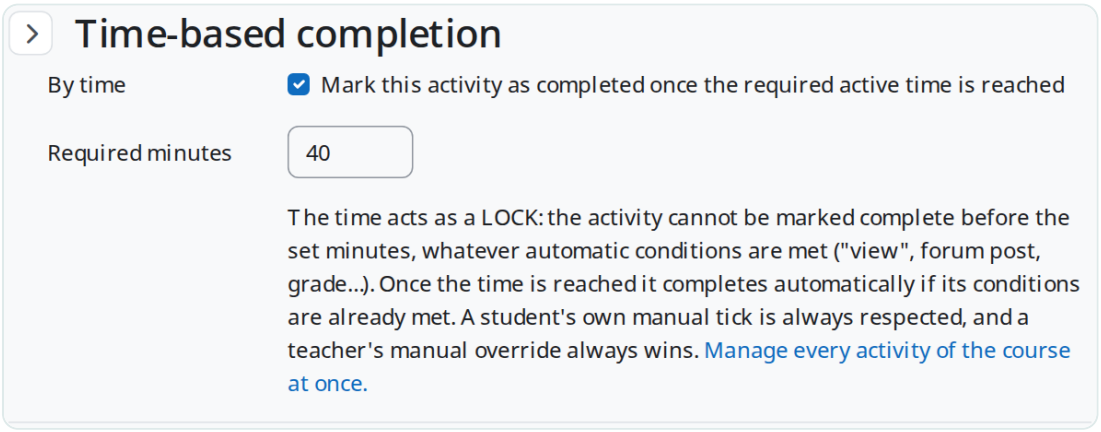

- Connect from **only one device** at a time.
- Recommended at platform level: limit concurrent sessions to 1 (**Limit concurrent logins = 1** in Moodle's security settings).

# 10 Completion by time (the lock) new

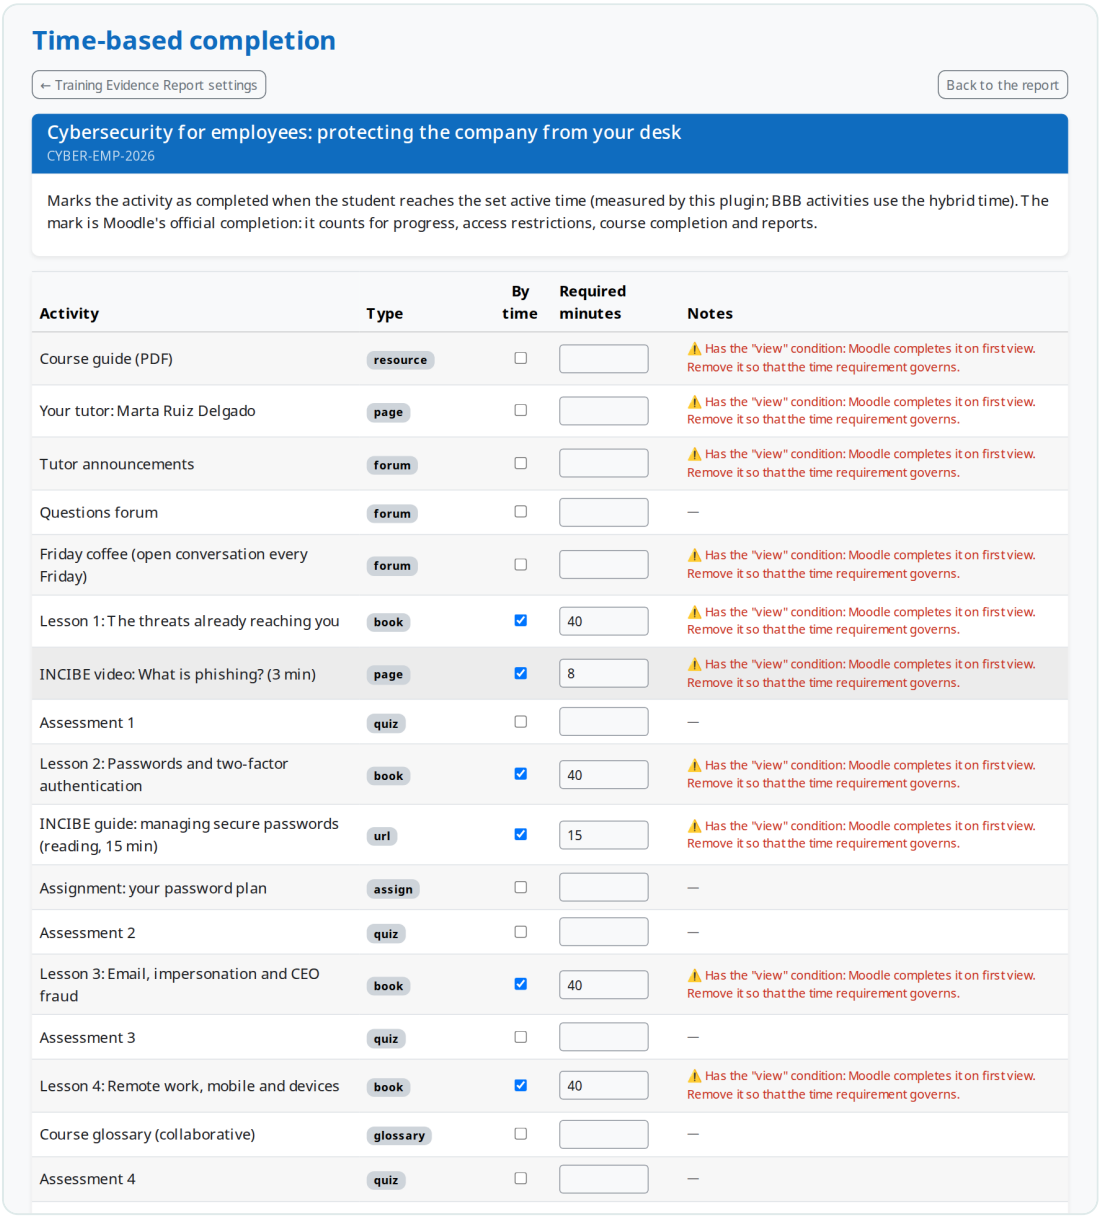

It lets you require that an activity is **not marked as completed** until the student has built up **X minutes of time spent** in it. It works as an **EXTRA lock** on top of Moodle's completion conditions: the activity is completed when **the core conditions AND the time** are met. If the student met the conditions early, the engine completes it **on its own** when they reach the minutes.

- It applies to **automatic** completion (conditions). The student's **manual** completion is respected as it is.
- It requires **completion tracking** to be enabled in the course (if it is off, the form tells you).
- In the report, activities completed by the engine are marked with the tag **"Completed ⏱ by time"**.

## Two places to set it

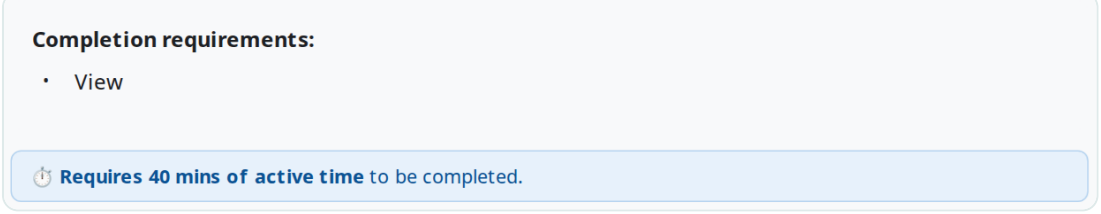

In **each activity's form**: a checkbox plus minutes. Managers see it and, if the manager allows it ("Teachers can change it"), so do editing teachers.

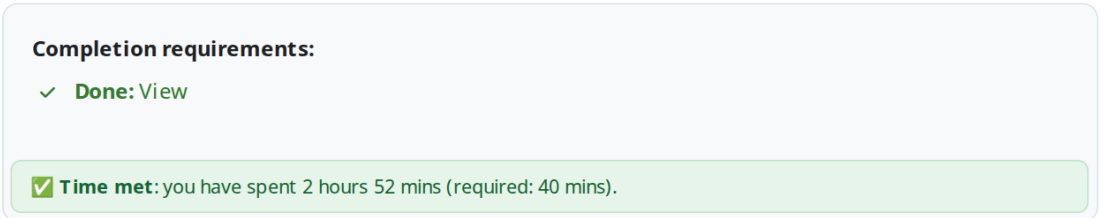

The **central screen** (linked from the course settings and from the form itself) lists **every activity with completion set up** and lets you set the minutes in bulk, with warnings if the activity's condition doesn't fit.

## What the student sees

Below Moodle's conditions, the plugin's note, short and to the point: "⏱ ***Requires X of active time*** *to be completed*". Read top to bottom, they tell a single story. The note can be hidden per course.

When the student reaches the minutes, the note turns green with their real time: “ ***Time met**: you have spent Y (required: X)”*. No repeating the same message.

**AN IMPORTANT DETAIL**

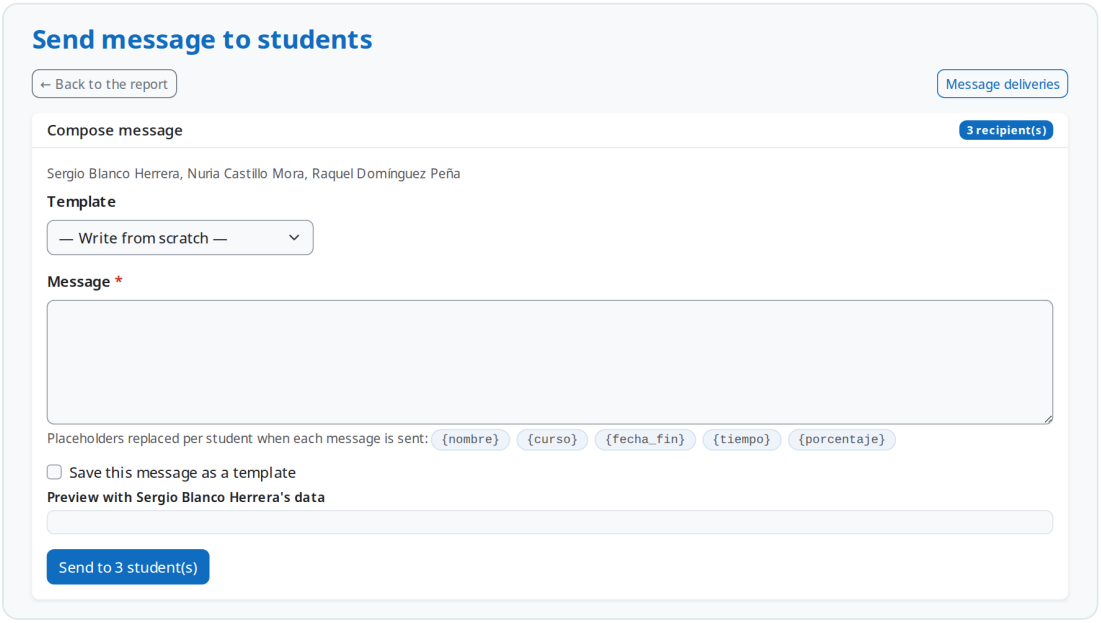

The lock never **un**-completes: if an activity was already completed before the lock was turned on, it stays as it is; and a completion the lock itself granted on reaching the minutes is **not withdrawn** even if the recorded time later drops (for example, after a data-retention purge or after raising the required minutes). And the time that counts is the **report’s** time (the same API as the clock, BBB rule included): all the numbers match each other.

If someone **removes a completion by hand** (an override in the course completion report), the lock always respects it, whoever did it, the main administrator included: the plugin keeps its own record of the marks it sets and only manages its own.

If the course tracking mode is **“Do not measure”**, no time comes in and the lock **does not act**: activities are completed by their normal conditions, and any earlier hold is released on the next run of the scheduled task.

## 11 Messaging from the list new

From the student summary you can **select students** (checkboxes; the heading one selects everyone filtered) and click **“Send message”**. Ideal for nudging the latecomers the filter has just shown you.

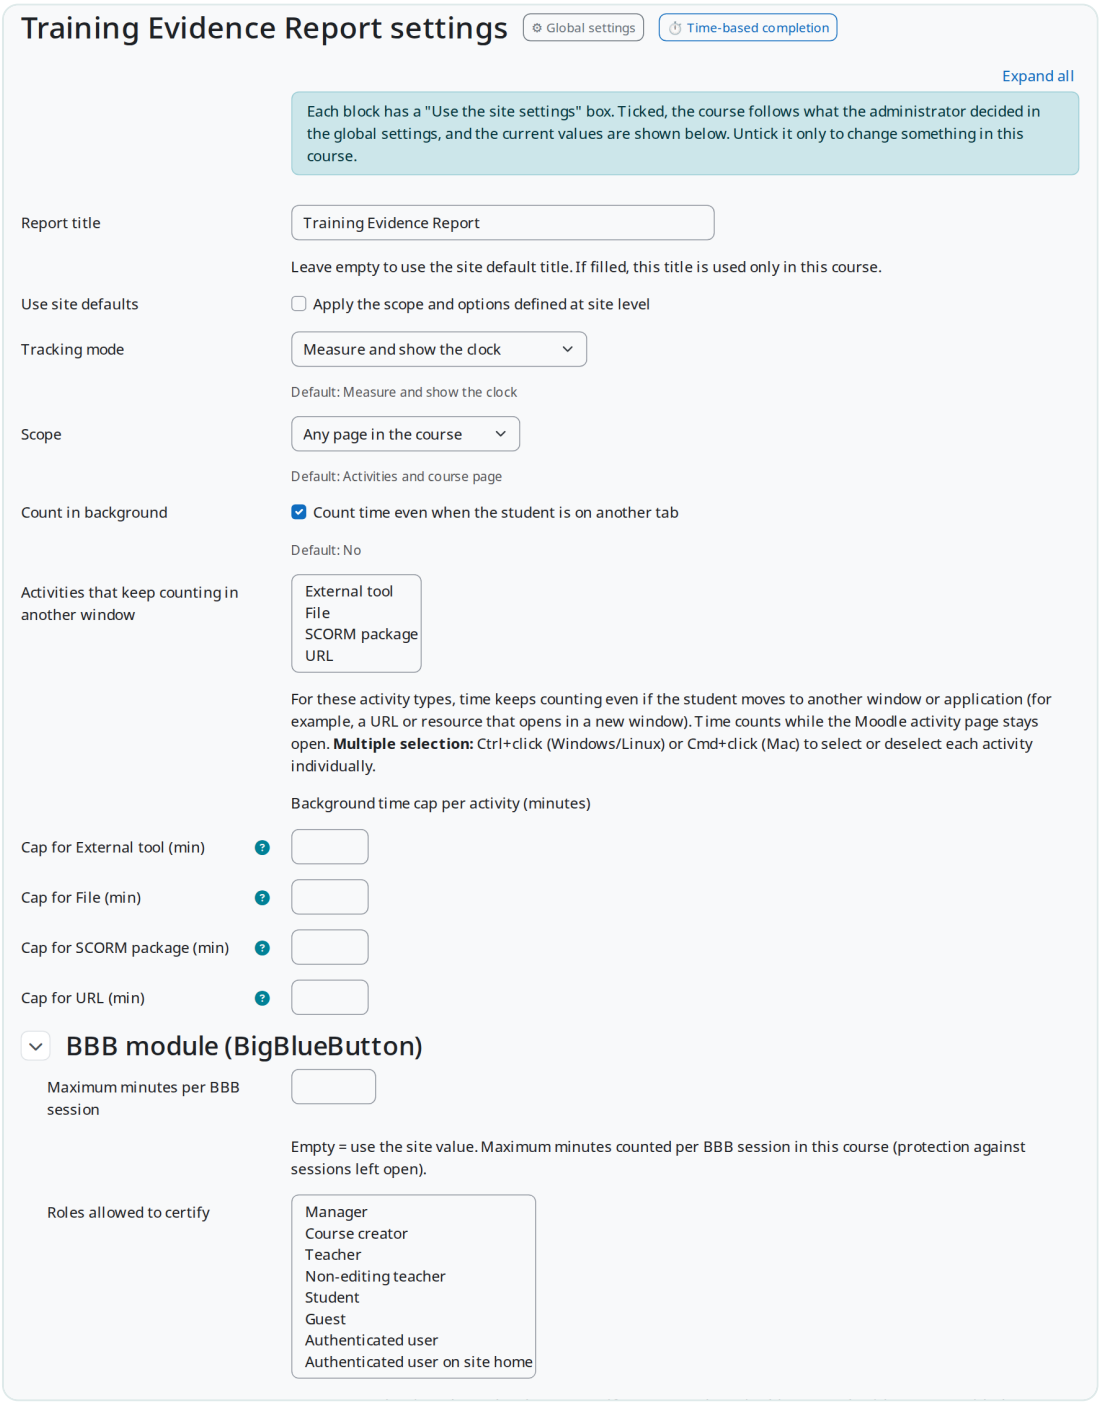

The compose page supports reusable **templates** (site and course) and **placeholders** filled in per student when sending: **{nombre}** (first name), **{curso}** (course), **{fecha_fin}** (end date), **{tiempo}** (time), **{porcentaje}** (percentage).

- Messages go through **Moodle’s internal messaging** (so they are on record, as an audit requires) and are sent in the sender’s name.
- Large batches go through a **paced queue**: the system respects your hosting limits without the teacher having to think about it. When you click “Send”, a few go out straight away and the every-minute task sends the rest; anyone who unenrolled in the meantime receives nothing.

- With **separate groups**, each teacher can only message the students in their own groups (the same rule as the report list).
- Every batch is **audited**: who sent it, the text and a snapshot of the filters used to choose the recipients.

## 12 Your clock, your style (themes) new

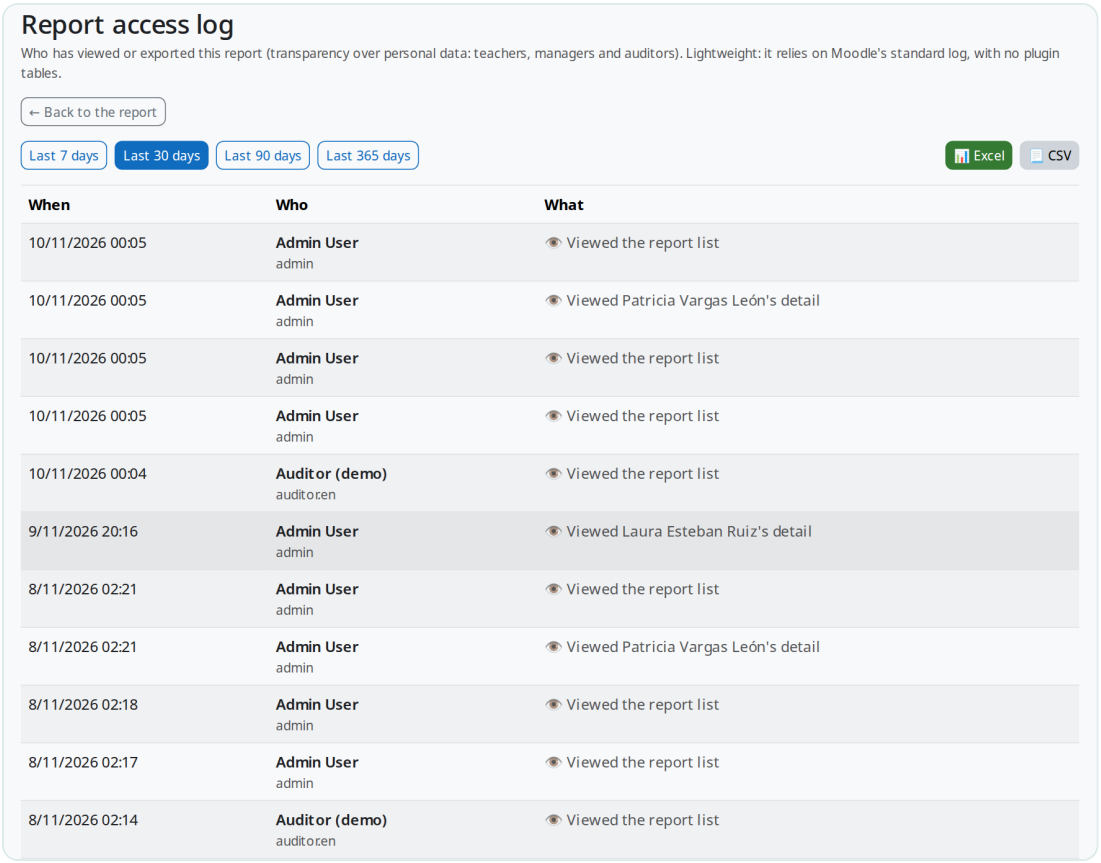

In the course report settings you choose the **clock theme** (9 styles, including “Electric” with a palette of 8 accessible colours), its **starting position** and whether the student can **drag it**. With a live **preview** before saving.

**REMEMBER THE THREE MODES**

**Visible** (clock + measurement), **hidden** (measures without showing anything) and **off** (does not measure). The theme only applies to visible mode.

## 13 Report access log new

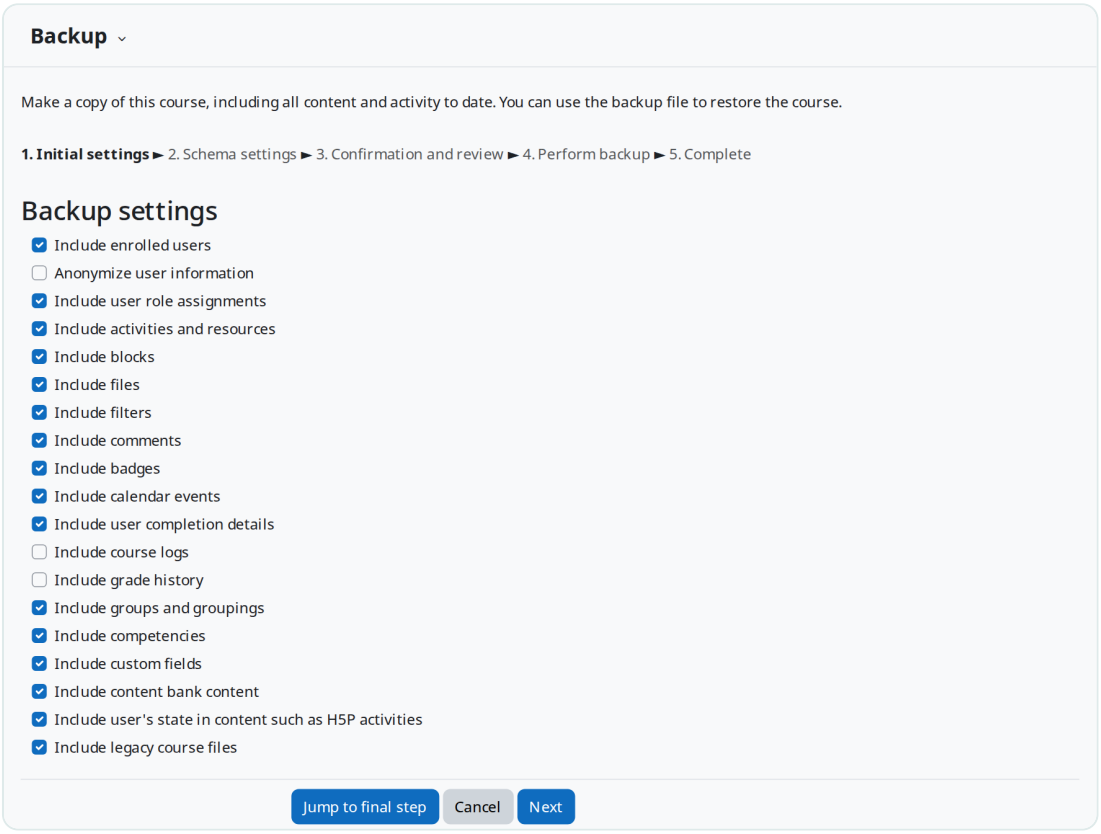

The report's **"Access log"** button opens the log of **who viewed and who exported** this course's report: person (with username), what they did (view / export and in which format), and when. With period filters (7/30/90/365 days) and **its own CSV and Excel export** (the buttons at the top right), which follows the chosen period: ready to attach as GDPR evidence.

The auditors are audited too: in an audit you can also prove **who accessed** the reports. (Technically they are Moodle log events: they travel with course backups if "Include course logs" is ticked.)

## 14 Backup and restore new

The plugin takes part in Moodle **course backups** (.mbz). The rule, in one line: **settings always · student data with "Include enrolled users" · audit trail with "Include course logs"**.

When creating the backup: **"Include enrolled users"** carries the times and the BBB certifications; **"Include course logs"**, the audit trails. With nothing ticked, the settings travel (a template course ready to reuse).

- Restoring the same backup **twice** doesn't duplicate a single second (idempotent).
- Users that don't exist at the destination are **skipped** (better too little than invented time).
- Keeping records for the required period (4 years for FUNDAE®) is still a job for the **PDF/CSV exports**: export the reports before shutting down a platform; the .mbz is a means of transport, not an evidence archive.
- Time from **activities that were deleted** (the report still counts it as "deleted activity") travels as time on the course page: the course total is preserved.

**RESTORING INTO A COURSE THAT ALREADY EXISTS**

This is how Moodle behaves, not the plugin, and it is worth knowing:
· If you restore **into an existing course**, tick **"Overwrite course configuration"**; otherwise Moodle skips the step that brings in the plugin's course-level data (front-page time, working hours, documents, templates) and only the activities arrive, with their own data.
· If you choose to **"Merge the backup course into the existing course"**, Moodle **duplicates the activities** (as it does with any other) and each copy brings its time: the student's total doubles. To repeat a restore, use **"Delete the contents of the existing course and then restore"** or a new course.

## A backup cannot bring in more time than the clock measures

Since version 2.47.0, restores apply the same caps as live tracking: a visit never exceeds **24 hours**, a quarter-hour slot never exceeds its **15 minutes**, and a visit with no date is discarded. A healthy backup arrives exactly as before; a hand-edited backup, or one from a very old version, can no longer inflate the report. What is

already in the database is left untouched: to find out whether you have out-of-range rows (they can only come from old versions), go to **Site administration → Reports → System status → "Measured time within the limits of the clock"**; the check lists the affected courses and changes nothing.

## Moving to another platform: making the totals match

When you restore a course with logs on **another Moodle site** (migration, new hosting, new platform), a student's total time may **not match** the original. It is not a backup error: the total is calculated with what the destination **has and has enabled**. The three causes, and how to avoid them:

| Cause | What happens | How to avoid it |
|---|---|---|
| **Site settings don't travel in the backup** | The .mbz carries the *course* settings, not the site settings. If **"Enable the BBB module"** is off at the destination, live-class time that came from Moodle's logs or from a **manager's certification** stops being added: only what the browser clock measured counts (often 0 in BBB). Certifications **are restored**, but they don't apply until the module is enabled. | Set the **same plugin site settings** at the destination as at the source (BBB module and its cap per session). Once enabled, the totals recalculate on their own. |
| **Backup without "Include course logs"** | The BBB module checks the browser clock against the room joins and leaves, which live in Moodle's logs. With no logs at the destination, that check disappears and BBB time relies on the browser measurement alone: the total may change. | In courses with BBB, tick **"Include enrolled users" and "Include course logs"**, both when creating the backup and when restoring it. |
| **Activities from a plugin that isn't installed at the destination** | Moodle **does not restore** those activities (it warns about missing modules), and each activity's time travels *inside* it: those minutes don't arrive and the total drops. Time on the course page always arrives. If the plugin is installed but **disabled**, the activity and its time are restored and the total doesn't change. | Install the **same activity plugins** the course uses at the destination **before** restoring. If you already restored, install them and restore again into a new course. |

**BEFORE MIGRATING: EXPORT AND COMPARE**

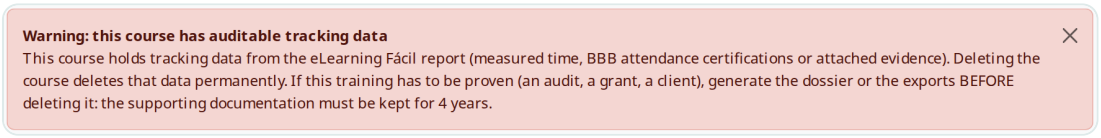

Generate the **dossier** (or the report's CSV/PDF export) on the source site **before** migrating or upgrading: that is your evidence, with the totals exactly as they were certified. After restoring, compare two or three students against that export; if they don't match, go through the three causes in the table. Don't shut down the source platform until you have checked.

## Resetting a course and unenrolling students starts their time from zero

Since version 2.45.0, if a **course is reset** (More → Course reuse → Reset) with "Unenrol users" ticked for the **student** role, the plugin deletes that course's measured time, working-hours slots, estimates and completion-by-time marks: a new edition doesn't inherit the hours of the previous one, and a student who repeats the course starts from zero. BBB certifications, certificate receipts, attachments and settings are left untouched. A reset that keeps the students (or only unenrols teachers) changes nothing. As with deletion: **export the reports or generate the dossier before resetting** (FUNDAE® requires keeping the evidence for four years).

## Deleting a course deletes its data with it

Since version 2.19.0, if a **course is deleted**, the plugin deletes all its tracking data with it (times, BBB certifications, attached evidence, settings). That is the right thing to do: data without a course can't be viewed in any report and would fall outside Moodle's privacy controls. That is why the platform warns you before letting you delete:

The warning on the deletion confirmation, only if the course has evidence (measured time, certifications or attachments).

**AUDITED TRAINING: DOSSIER BEFORE DELETING**

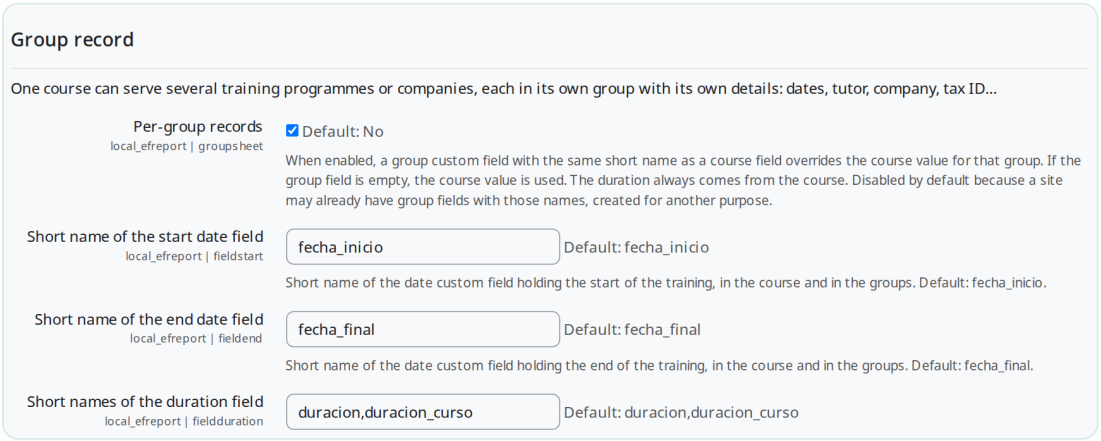

The duty to keep the documentation for 4 years is met with the **dossier** (or the PDF/CSV exports) generated **before** deleting the course, not with invisible data in the database. Generate and keep the dossier; then you can delete the course with peace of mind.

# 15 Group record: several actions or companies new

One course can serve **several training actions or companies**: each one goes in its own **group**, with its own sheet (dates, tutor, company, tax ID…). The report shows the sheet of the group you choose and never mixes data between groups.

## 1. Turning it on (administrator)

In the plugin's site settings, **"Group record"** block, tick **"Per-group records"**. It is **off** by default: while it is off, the report is exactly the same as always.

The same block lets you change the **short names** of the start and end dates and of the duration, if your site uses different ones. By default they are the usual ones.

## 2. Create the group fields (once)

In **Site administration → Courses → Group custom fields**, create the fields that change from one group to another, **with the same short name as the course field**. For example:

| Where it is usually filled in | Short names |
|---|---|
| Course: the action | `denominacion_aaff` , `aaff` , `modalidad` , `duracion` , `expediente` |
| Course: who delivers it | `centro_formacion` , `cif_centro` |
| Group: the intake | `numgrupo` , `fecha_inicio` , `fecha_final` , `tutor` , `empresa` , `cif_empresa` |

**DON'T MIX UP THE TAX IDS**

In audited training there are usually several: the one for the **training provider** delivering the course and the one for the **company** the employees work for. Use them in separate fields, for example `cif_centro` in the course and `cif_empresa` in the group.

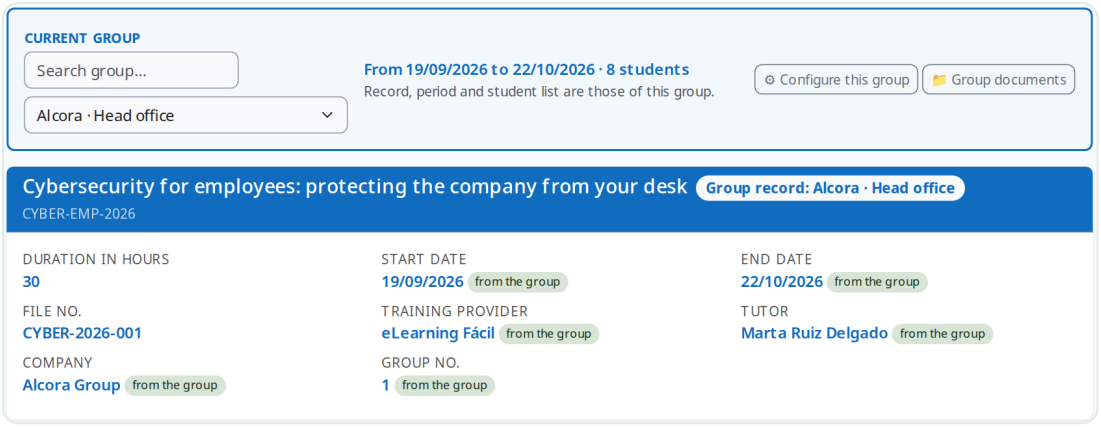

## 3. Fill in each group's sheet

In **Participants → Groups**, edit the group: its fields appear at the end of the "Edit group settings" form. Fill in **only what changes**:

- **If a group field is left empty**, the course value is used.
- **The duration is always the course duration**: it cannot be changed per group, so the progress bar, the alerts and the certificates stay the same.
- A group field of a **different type** from the course field (for example, text versus date) is ignored, and the manager sees a warning.
- Fields that **only exist in the group**, such as the group number, are also shown.

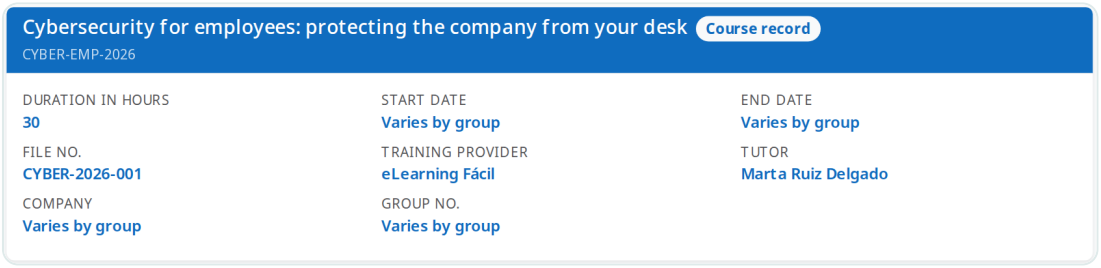

## 4. In the report

Under the title you'll find the **"Current group"** box. Type part of the name in **"Search group…"** to narrow the list, handy when you have many groups, and pick the group: the report reloads with its sheet, its period and its students. The first two options are always **"No group"** and **"All students (with and without group)"**, which is the whole course. The filters' **"Clear"** button keeps the group you are viewing, and export file names end with the group name, shortened, or with "sin_grupo" (no group) or "todos" (all).

Data that comes from the group carries the **"from the group"** mark; the rest comes from the course record. The filter period is the group's period.

With **“All students”**, data that changes from group to group says **“Varies by group”** and a notice invites you to choose a group. In this view, **each student is measured with their group’s period**, shown under the group name. Students with no group, or in several groups with different periods, are measured with the course period. If you pick a period by hand in the filter, that period applies to everyone.

#### ACTIVITIES FOR OTHER GROUPS

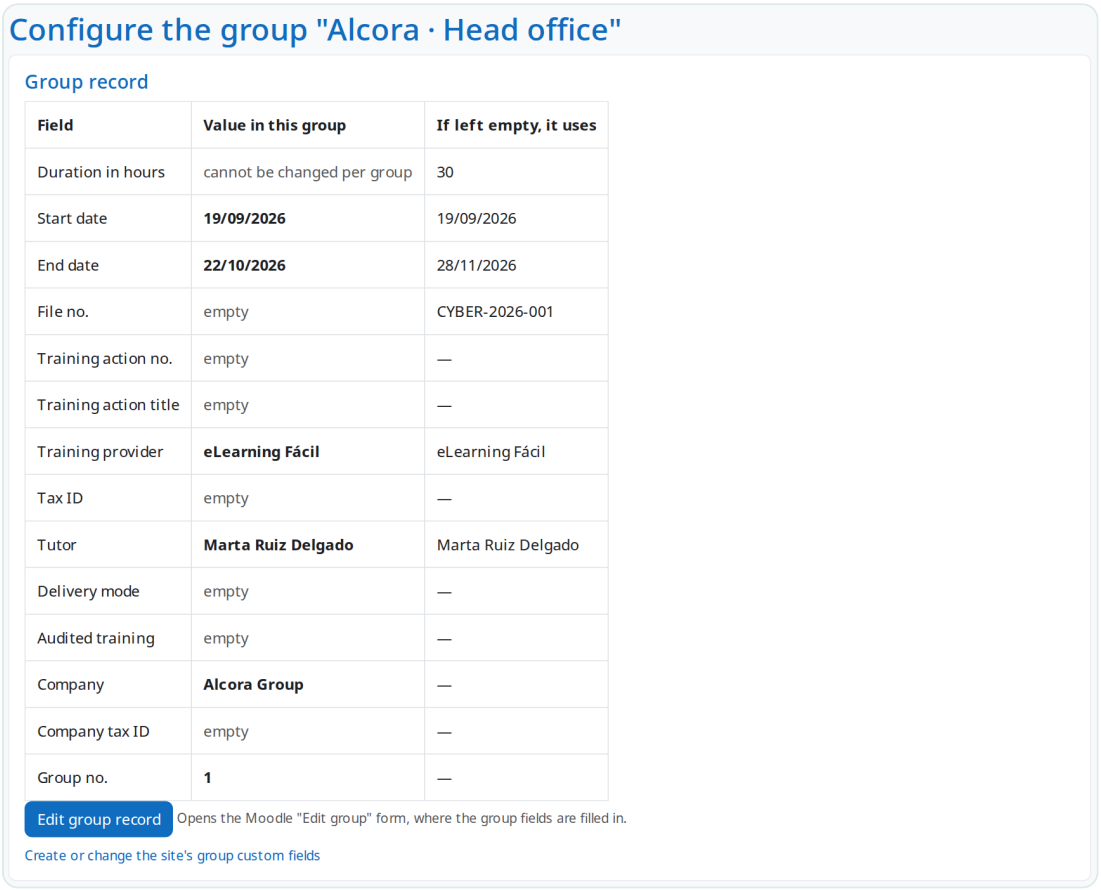

If an activity, or its section, is restricted to one group, it doesn’t count towards the activity total for students in other groups and doesn’t appear in their breakdown. That way everyone can reach 100%. Activities locked by date and those hidden with the eye icon still count as always.

#### THE AUDITOR ONLY SEES THEIR GROUP

Anyone with access to a single group (for example, the Auditor role limited to one action) sees it selected straight away, with its sheet and its period, and cannot see the others.

## 5. “Configure this group” (manager)

The button in the box opens a page, for the manager only, with each item of the sheet, its value in the group and what it inherits from the course if left empty. From there, **“Edit group record”** opens the Moodle form.

## 16 Assessments: the 75% rule new

FUNDAE® considers a participant to have **finished** when they have done at least **75% of the assessments** (*controles de aprendizaje*), as well as the time. With this feature the report counts, for each student, the assessments done within their period, separately from the time percentage. It is **off** by default: while it is off, the report is exactly the same as always.

### 1. What counts as an assessment

- Any **graded activity** in the course: quizzes, assignments, lessons, graded SCORM, workshops… An ungraded forum or assignment doesn't count.
- The manager can **leave out** the ones that aren't assessments, for example a graded survey, in the course settings.
- Each student is only measured against the assessments they **can open**: those restricted to another group don't count for them (§15).

An assessment is **done** when it has a grade or is completed, with a date within the student's period; the date shown is the earlier of the two.

> **UNGRADED ASSIGNMENTS**
>
> An assignment submitted but not graded and without completion shows as "not done" until the teacher grades it. That is on purpose: when in doubt, the report errs on the low side.

## 2. Turning it on

**Site settings → Assessments (the 75% rule)**: on or off by default, minimum assessments (75%) and minimum time (75% of the duration). **Course settings → Assessments**: untick "Use the site settings" to turn them on or change the thresholds in that course only, and in "Activities that count as assessments" untick the ones that aren't.

## 3. In the report

- **"Assessments"** column: "3 of 4" with the percentage below and ✓ or ✗ depending on whether it reaches the minimum. It can be sorted. In Excel and CSV there are two columns, "Assessments" and "% of assessments".
- **"Assessments"** filter: "Minimum reached" or "Below the minimum".
- **"Minimum requirements"** filter: meeting or not meeting the minimum time *and* the minimum assessments. If the course has no duration, only the assessments are checked and the breakdown says so.
- Student breakdown: the line "Minimum time ✓ · Minimum assessments ✓", the assessments card and the table with each assessment, its status, the date and time it was done and the grade. The table is also in the student's PDF, Excel and CSV.

> **FOR OTHER PLUGINS**
>
> The `local_efreport\local\controlapi` class gives the same numbers to efalerts, efbulkcert and any in-house development: which assessments the course has and how many each student has done.

## 4. Audited training (course or group) and minimum requirements new

Not every course, nor every group in a course, has to be proven to a third party. The report tells them apart:

- **Audited training** (in Spain, *formación bonificada*): the minimum requirements are the fixed ones of the scheme, FUNDAE's in Spain: minimum time as a share of the duration and minimum assessments. Only the thresholds can change.
- **Not audited**: you choose which conditions count, with their threshold: time, assessments, completed activities or passing.

How the report decides: with a **custom field** on the course ( `bonificado` by default; you choose its short name in the site settings), and on the group if any group differs, ideally a drop-down with "Yes" and "No"; empty in the group = inherits from the course. Without that field, with the **"Audited training"** checkbox in the course settings. The defaults are in **Site settings → Minimum requirements and audited training**, with "Audited training by default" off so nothing changes in existing courses.

Each student is assessed according to their group. In the breakdown, the line under their name says it all: "Audited · Minimum time ✓ · Minimum assessments ✗", or the course's own conditions if the training is not audited. The **"Minimum requirements"** filter appears when the course or any of its groups is audited training, when assessments are on or when the course has its own conditions.

## 5. Pass or fail new

If the course has a **grade to pass** in the gradebook, the report compares the final grade with it: next to the grade it shows **"Pass"**, **"Fail"** or **"Not graded"**, with the **"Result"** filter and the "Result" column in the exports.

Passing is **not** part of the FUNDAE® requirement, which funds anyone who finishes even if they fail; it decides which document the student is due: the diploma or the attendance certificate.

### 6. Completion data (for your administrative agency) new

For audited training, under "Download the report:" there is a discreet line, **"Completion data (for the administrative agency): Excel · CSV"**. It downloads **one row per participant** of what you are viewing (the chosen group and the filters set), always with the same columns: ID number, surname, first name, email, group, company and company tax ID (from the group record), audited, time, hours, time %, assessments, final grade, result (pass / fail), minimum requirements (met / not met), expected document, certificate issued, and hours inside and outside working hours (§20). It is not the FUNDAE® XML file: it is the sheet your administrative agency, or its software, uses to prepare the completion notice. It is also available in "Training Management".

The **Excel** file is laid out to be read at a glance: a title with the course, the group and the period; the columns grouped into six blocks with their heading (**Participant · Company · Time · Assessments · Result · Document**); fitted column widths; and the hours (decimal, inside and outside working hours) as numbers, ready to add up and filter. The CSV has the same columns in the same order.

The short names of the "company" and "company tax ID" fields can be changed in the site settings (by default, `empresa` and `cif_empresa`).

## 17 Certificates: diploma and attendance new

Spanish regulations require providers to give, within two months of the end of the training, a **diploma** to those who finish with a pass and a **certificate of attendance** to those who finish without passing. The report reads the course's certificate activities, from **Custom certificate** and **Course certificate**, and tells you for each student which document they are due, whether it has been issued, whether they have received it and whether the deadline is close. It is **off** by default: turn it on in **Site settings → Certificates → Read the certificates of the course**.

### 1. Which document is due

- Finishes (meets the minimum requirements, §16) and passes: **diploma**.
- Finishes without passing, or without a grade, once their period plus the grace period is over: **attendance certificate**.
- Doesn't finish: none.

The **grace period**, 7 by default, gives the tutor time to grade work handed in on the last day before the "fail" becomes final. In the course settings, an **empty** field means "use the site value"; enter a number only if this course needs a different margin (0 = no margin).

### 2. Which activity is each document

In **Course settings → Certificates** you choose the diploma activity and the attendance certificate activity. If a group uses different templates, for example with its company's logo, you set its own in **"Configure this group"**; empty = the course ones. With no certificate module, or if you hand them out on paper, the report still says which document is due, and the receipt is the signed document you upload to the group documents.

## 3. In the report

- **"Certificate"** column (on screen): "Diploma 02/02/2026 · opened on 03/02/2026" or "not opened yet", "Not issued", and below it "Expected: diploma / attendance certificate / none". The report's **PDF, Excel and CSV** only include the document and its date ("Diploma 02/02/2026" or "Not issued"): the receipt and the document due are details for the manager, who sees them on screen and in "Data for the completion".
- **Courses with several certificates** (per module, for example, with or without FUNDAE®): if the course has two or more certificate activities and one of them is neither the diploma nor the attendance certificate, the column becomes a **list**: "2 issued" at the top and below it each certificate with its date and whether it was opened; those not issued in grey, and a ★ on the one due if the course has a diploma and an attendance certificate set up. Only the **student's own** certificates are listed: one restricted to another group doesn't appear (unless it was issued to them). In Excel and CSV the full list goes in the cell plus a "No. of certificates" column; in the PDF, one line per document. A course with only a diploma and an attendance certificate, or with a single certificate, looks the same as always.
- Filters in the **"Certificate"** block: issued, not issued, opened, or issued and not opened yet; **certificates issued** (none, one, two or more, all of theirs); document due; and, for the manager and the teacher only, the **deadline**: overdue without issuing, or due within 15 days.
- Warnings for the manager, in red: issued to someone who isn't due it, a document other than the one due, the student has both, or it is due and still not issued after the deadline.
- Student breakdown: a card with the document, the date, the **receipt** (first opening in the course and first download from "My diplomas and certificates") and the deadline.

## 4. Automatic issuing by the report

With **"Automatic issuing by the report"** turned on in the course settings, every night the report issues the diploma to those who finish and pass, and the attendance certificate to those who finish without passing once their period plus the margin is over. It is issued with the activity's own module, so it is a normal certificate, verifiable and with its template, and it works **even if the enrolment has expired**. The student gets a Moodle notification, by email if they have it set up that way, with the download link. If a manager **revokes** (deletes) a student's certificate, automatic issuing **does not issue it again**: it assumes there is a reason, and it can be reissued by hand from the activity if needed.

> **WITHOUT OVERLOADING THE SERVER**
>
> The task runs once a day, only in courses with automatic issuing on whose end date is no more than 60 days ago, in batches and within a time budget: if it doesn't finish, it carries on the next night.

## 5. "My diplomas and certificates" and the receipt

The student has the **"My diplomas and certificates"** page in their **profile**, with everything issued to them in any course, and can download it **without going into the course**, even after their enrolment has ended. Every download is recorded with its date and time: that is the proof of receipt FUNDAE® asks for. The report shows the first proof of receipt, the opening in the course or that download, and the breakdown shows both.

**CLOSING THE COURSE**

If you close the course by letting the enrolment expire, the student can no longer get in: the way to deliver the certificate is this profile page and the notification. If the certificate was issued while the course was open, the report also takes the first time they opened the activity as the receipt.

## 18 Quality survey: received and returned new

FUNDAE® requires the **quality evaluation questionnaire** (its official template, one PDF per group) to be available on the platform, with a record showing it was delivered to each participant. Answering it is optional for the student. The report reflects this with one column and two filters. It is **off** by default: turn it on in **Site settings → Quality survey → Read the quality survey activity**; while it is off, the report doesn't change.

### 1. The survey as an activity

We recommend an **Assignment** with the official PDF: the student opens it, downloads the questionnaire and, if they wish, submits the completed PDF. Any other activity works too (a page with the link, your own questionnaire…): the report works out by type what "returned" means.

- **Received**: the first time the student opens the survey activity, with its date. It is the proof of delivery FUNDAE® asks for, and everyone who can see the report sees it, the auditor included.
- **Returned**: the Assignment submitted, or any other activity marked as completed. Only the manager and the teacher see it, because returning it is optional and not required of the student.

### 2. Which activity is the survey

In **Course settings → Quality survey** you choose the activity. As the official template is per group, in **"Configure this group"** (group record, §15) each group can point to its own Assignment; empty = the course one. If a group has no survey assigned, its column says "No survey in their group".

### 3. In the report

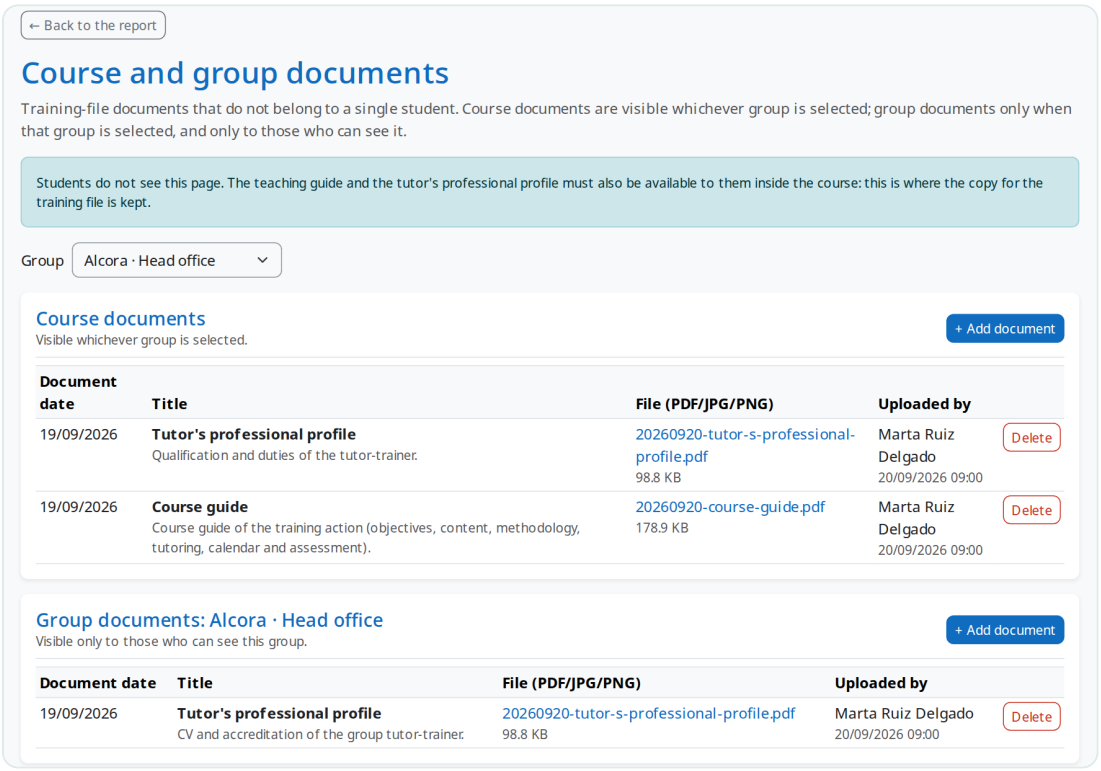

- **"Quality survey"** column: "Received 20/07/2026 · returned on 22/07/2026", "Received 25/07/2026 · not returned" or "Not received". It sorts like the others and is included in CSV, Excel and PDF.
- Filters in the **"Survey and certificate"** block: **Quality survey** (received / not received) and, for the manager and the teacher only, **Return of the survey** (returned / not returned). The filters carry over to the exports and to messaging from the list: with "not received" you are one click away from reminding those students to download the questionnaire.
- Student breakdown: a card with the date and time it was received and, for the manager, returned.

**IF YOU HAND OUT THE SURVEY ON PAPER**

Leave the setting off: the report adds nothing, and the signed acknowledgement of receipt goes with the group documents (§19), just like paper certificates (§17).

# 19 Course and group documents new

A training action's file includes documents that **don't belong to a single student**: the course guide, the tutor's CV and credentials, the start notice, the diploma receipts, minutes… They are now kept next to the report, on two levels: **course** documents, visible with any group, and **group** documents, only visible to those who can see that group. There are no predefined types: title and description are free text. Until someone uploads something, the report doesn't change.

Choose the group at the top. Each document shows its date, title and description, the file (with a download link) and who uploaded it and when.

> **STUDENTS DON'T SEE THIS PAGE**
>
> FUNDAE® requires the **course guide** and the **tutor's professional profile** to be visible to students on the platform. Here you keep the file copy, the one the auditor checks: also put them inside the course (a resource at the start, or the tutor's description), where students can find them.

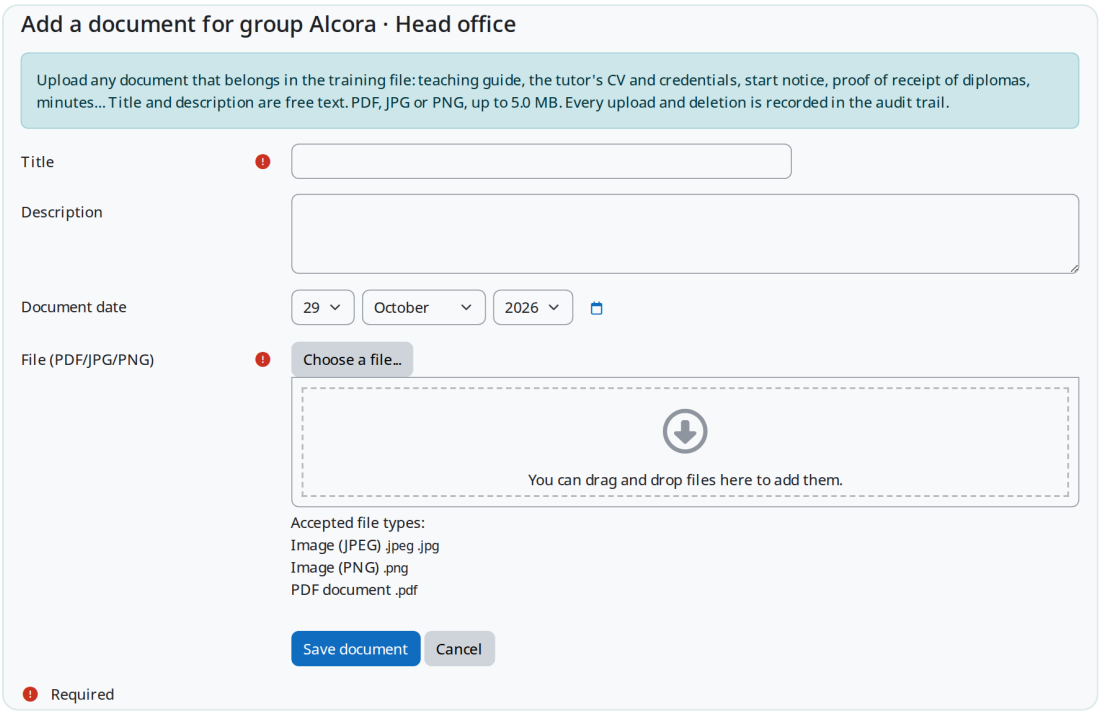

## 1. Where to find it

- In the report with the **group record** (§15): the **"Group documents"** button in the "Current group" box (or "Course documents" if you are viewing all students).
- In **"Configure this group"**: the "Group documents" box says how many there are and opens the page.
- On the **"Training Management"** page in the course menu: "Course and group documents", under "Documentation and close-out".
- Without the group record, the report shows the **"Documents (n)"** button only once at least one has been uploaded.

**WARNING WHEN THEY ARE MISSING IN AUDITED TRAINING**

If the course is marked as **audited training** (§16) and has no course documents, or the group you are viewing is audited training and has no documents of its own, the report and this page show a warning with a link to upload them. Only those who can upload them see it; the auditor doesn't.

## 2. Uploading a document

Title, optional description, document date and file: **PDF, JPG or PNG**, with the same size limit as supporting evidence (5 MB by default, §4). The file is renamed to `{date}-{title}` so it can be recognised on its own.

## 3. Who can do what

| Profile | Course documents | Group documents |
|---|---|---|
| **Manager** | Views, uploads and deletes | Views, uploads and deletes, in all groups |
| **Editing teacher** | Views | Views, uploads and deletes, **only in their groups** if the course uses separate groups |
| **Non-editing teacher** | Views | Views those of their groups |
| **Auditor** | Views and downloads | Views and downloads those of their groups |

The capability to upload and delete a group's documents is `local/efreport:managegroupdocs` (manager and editing teacher by default); you can adjust it in Moodle's permissions. Course documents are managed by whoever can configure the course ( `local/efreport:managecourse` ). The Auditor role has neither.

### 4. Audit, backups and deletion

- Every upload and deletion is written to the **audit trail**: who, which file, which group and when.
- They travel in backups with **"Include enrolled users"**, like supporting evidence: they are the evidence for this edition, not part of the course template. A group's documents arrive in their group in the restored course; if the group doesn't travel, neither do its documents.
- When you **delete a group** in Moodle, its documents are deleted (the audit trail remains). Download them first if you need them.
- The **dossier** (local_efdossier 0.4.0 or later) includes them so you can keep them for the 4 years: course documents in `curso/`, each group's in `grupo/`, with a CSV index.
- The **quality survey doesn't go here**: students don't see the report; the survey stays in its Assignment (§18).

## 20 Working hours: inside and outside new

In Spain's FUNDAE® scheme, training hours done **during working hours** count towards the company's private co-financing. The report can show, within each student's time, how much was done inside working hours and how much outside. It is **off** by default: turn it on in **Site settings → Working hours**. And it is optional for each group: a group with no working hours set shows no breakdown, no warnings and no zeros.

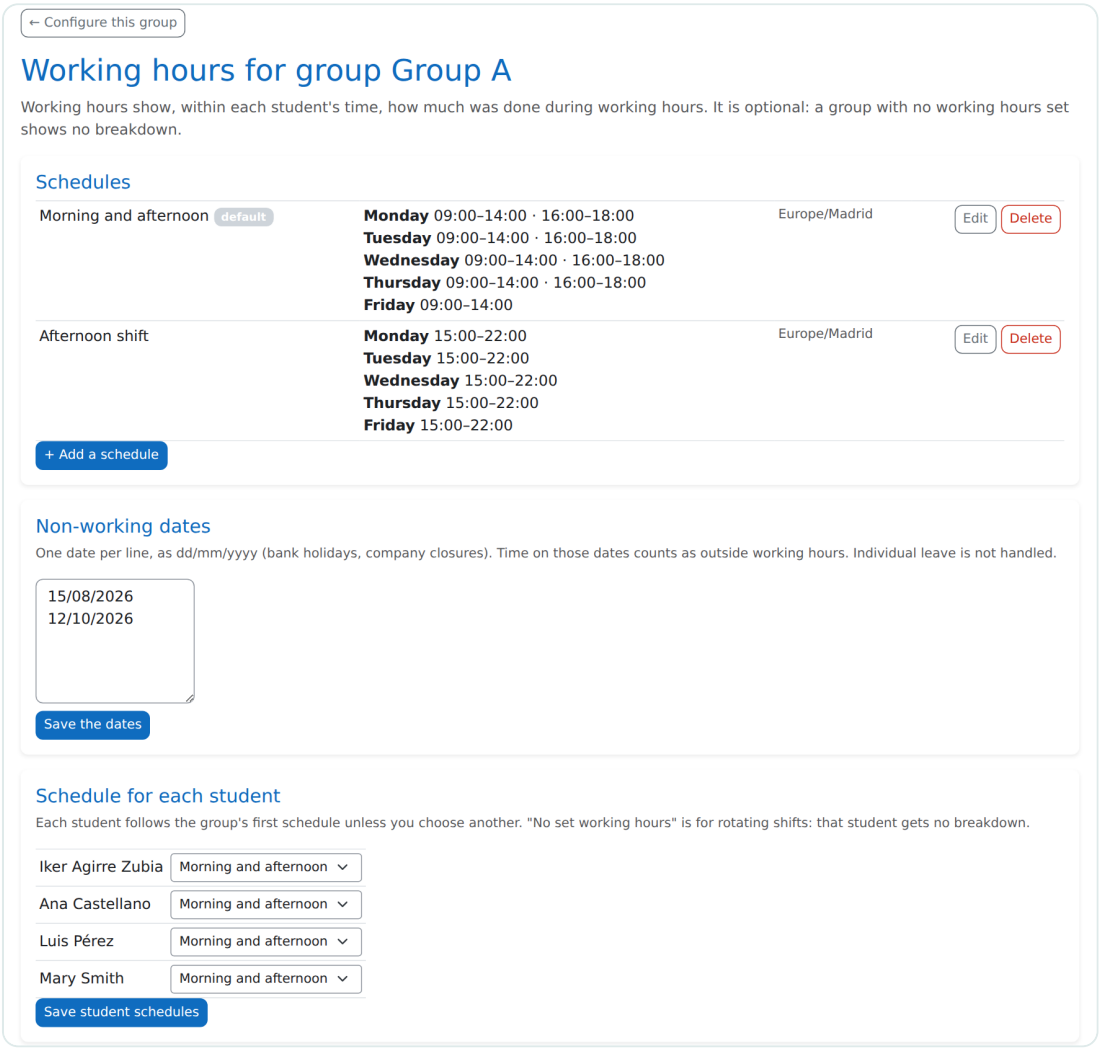

### 1. How it measures

The clock doesn't change: it keeps storing the time of each visit as always. From the moment you turn the feature on, the server **also** records each minute in the **quarter of an hour** it fell in. A quarter of an hour counts as "inside working hours" if it starts within a slot of the student's schedule, on a working day. That is why schedule times are entered in quarters (9:00, 9:15, 9:30…).

> **EARLIER TIME IS AN ESTIMATE**
>
> Visits before the day the feature was turned on have no quarter-hour slots: their time is spread across the visit and the result is marked **"(estimated)"**. Turn the feature on before the course starts if you want exact figures.

### 2. Each group's working hours

In the report with the group record (§15): **"Configure this group" → Working hours → "Set up working hours"**.

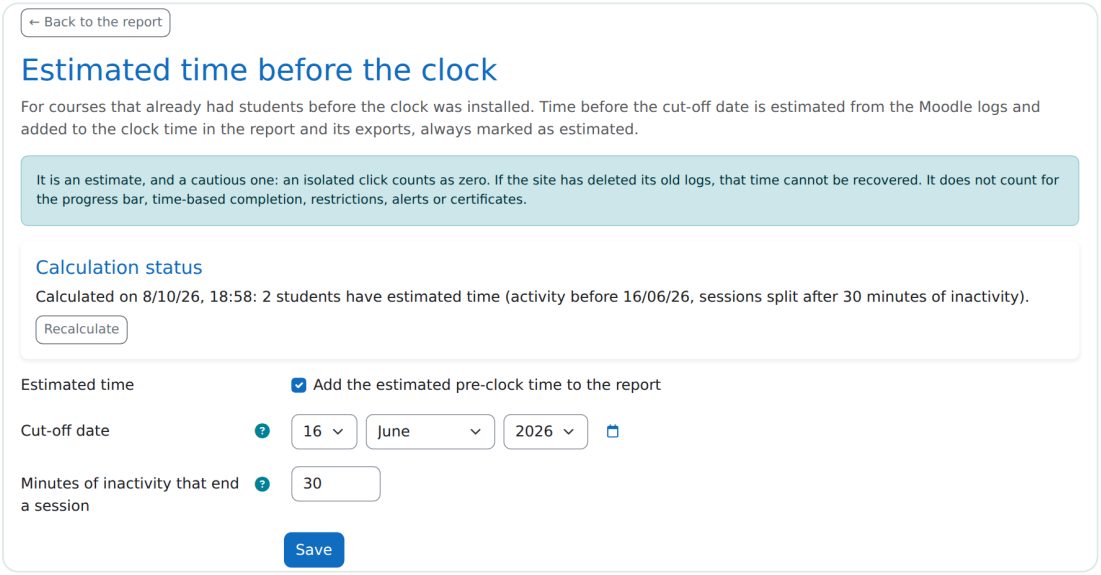

- **Named schedules** (“Morning”, “Afternoon”…): days of the week, up to two slots per day, and the timezone the times are written in. The first one is the group’s default schedule.
- **Non-working dates** (public holidays, closures): one per line. Time on those dates counts as outside working hours. If the list is empty, the page warns you. Individual holidays are not handled.
- **Each student’s schedule**: everyone follows the first one unless you choose another. “No set working hours” is for rotating shifts: that student gets no breakdown.

## 3. In the report

- Under each student’s time: **“Within working hours 4h 2m · outside 4h 0m”**. The auditor sees it too.
- **“not broken down”** is the part of the total that no quarter of an hour accounts for: BBB sessions certified by hand, or time measured while the feature was off.
- With “All students”, a student in several groups with working hours set shows as “Several groups have working hours set: choose a group”.
- In CSV and Excel, and in “Completion data”, two numeric columns: **Hours within working hours** and **Hours outside working hours**. In the PDF, the same line under the time.
- Time estimated from the logs (where it exists) is not part of this breakdown.

# 21 Estimated time before the clock new

For courses that **already had students before the clock was installed**. Earlier time is estimated from Moodle's logs and added to the clock time in the report, always marked. It is **off** by default: turn it on in **Site settings → Estimated time from the logs** and then, course by course, in **Training Management → Estimated time before the clock**.

## 1. How it is calculated

- Each student's log events are grouped into **sessions**. A session ends after **30 minutes without activity** (this can be changed) and lasts from its first event to its last. A single click counts as zero: the estimate stays low on purpose.
- Only time **before the cut-off date** counts, which is when the clock started measuring in the course. It is suggested automatically (the clock's first record) and cannot be later than that: that time would be counted twice.
- It respects the period: a session before the start of the course or group is left out.
- It is calculated **in the background**, a few students at a time. The page shows the progress and refreshes itself; "Recalculate" runs it once more.

> **WHAT IT DOESN'T DO**
>
> It **does not count** towards the progress bar, completion by time, access restrictions, alerts or certificate issuing: all of those still use the clock only. It isn't part of the working-hours breakdown either (§20). And if the site deleted its old logs, that time cannot be recovered.

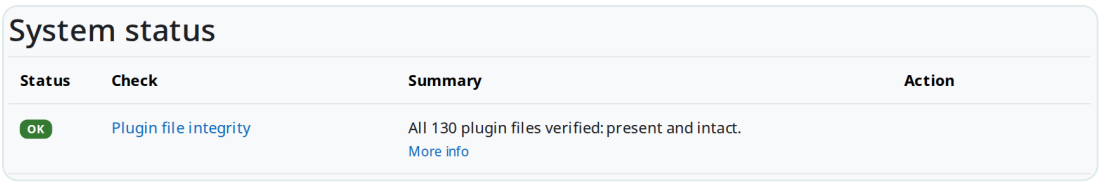

## 2. In the report

- The **total time and its percentage** include the estimate.
- The manager and the teacher see the breakdown below: **"Clock 16h 34m · estimated 1h 35m"**.
- The auditor sees the total with a discreet **"includes estimated time"** mark, without figures.

- In CSV and Excel: for the manager, two extra columns (**Clock hours** and **Estimated hours**) next to the total; for the auditor, an **"Includes estimated time"** yes / no column.

## 22 Installation integrity check new

Every plugin zip includes an **integrity manifest** (a fingerprint of each file). After installing or upgrading, open **Site administration → Reports → System status**:

The **"Plugin file integrity"** row must show **OK** ("All N plugin files verified: present and intact."). If your hosting lost or corrupted a file during installation, it shows an **Error with the exact list** and what to do: reinstall the plugin (if it happens again, extract the zip with your hosting's file manager) and purge the caches.

> **NOTHING GOES UNNOTICED**
>
> An incomplete installation can no longer go unnoticed: this check spots it straight away and names the exact file affected.

## 23 Recommendations for training audits

- Always set the course **start and end date** (or leave the end empty for an "open" course).
- Fill in the **identification fields** (file no., training action, tax ID…) so they appear in the PDF.
- **Log retention**: in older courses, visits and dates may be missing if Moodle has already purged its logs. **Time** and **completions** last longer.
- Export the report as a **PDF** at the end of each training action as evidence.

## 24 Access for the auditor

When training has to be proven (a grant, a client, a compliance check), an **auditor** usually needs to **view** the report but **not change anything**. In Moodle, the answer is a **custom read-only role**.

- The auditor needs the `local/efreport:viewreport` capability to see the report (plus those for **Logs** and **Grades** if you want them to check those too).
- Moodle **doesn't ship** an "auditor" role: it is a role you set up once (**Site administration → Users → Permissions → Define roles**).

### THE ROLE COMES READY-MADE, INSIDE THE PLUGIN (XML)

The plugin ships the read-only role eLearning Fácil maintains for the whole family of plugins, in the `roles/` folder (in the plugin folder and in the zip you installed): import `roles/inspectorfundae_en.xml` (named "Auditor") for a site in English, or `roles/inspectorfundae.xml` (named "Inspector FUNDAE") for a site in Spanish. Both give the same role (short name `inspectorfundae`, identical permissions), so you can Reset an existing role with either. To import it:

1. **Site administration → Users → Permissions → Define roles → Add a new role**.
2. In **Use role preset**, upload the XML file of your language and click **Continue**.
3. Check the name and description and click **Create this role**.
4. Enrol the auditor in each course to audit with that role (as administrator; a manager can do it once the role is ticked in **Allow role assignments**). In a course with separate groups, add the auditor to the groups they may see (§15).

**Role that already exists:** open the role → **"Reset"** → upload either XML (it keeps the assignments of the users who already have it).

### WHAT THE ROLE CAN AND CANNOT DO

**Can:** view the report and its exports, the group and course documents, the course logs and grades, and the read-only reports and blocks of the other plugins of the family (communications report, links block, time clock report). The My Progress block is personal: students' progress is checked in the report. **Cannot:** configure the plugins, certify attendance, send messages, upload or delete evidence or documents, see the management-only details or edit anything in the course. It has no archetype, so it never inherits new permissions when Moodle or the plugins are upgraded.

### IMPORTANT: PLUGIN FIRST, THEN THE ROLE

Upload the role XML **after installing the plugin** (and any others you are going to use). The file also lists capabilities of other eLearning Fácil plugins (`local_efcomms`, `block_eflinks`, `local_eftimeclock`, `local_efdossier`, `local_efalerts`, `local_efready`, `block_efprogress`): Moodle silently ignores the ones that are not installed, so the preset works with this plugin alone. If you install one of those plugins later, **Reset** the role with the same XML so its permissions are applied.

Need the role adapted to your case? Write to us at **elearningfacil.com**.

## 25 More plugins by eLearning Fácil

This report is the heart of the **Training Evidence Pack**. Around it there is a family of eLearning Fácil plugins that work the same way, together or on their own:

### Training Evidence Pack

**Training evidence, ready for an audit.** Time and tracking report with a reliable clock (inactivity, period, 75% assessments), a report on communications with the tutor, a course dossier in a ZIP you can keep for as long as your scheme requires (4 years under Spain's FUNDAE® scheme), a block with links to the reports, and access to activities by time spent. With a record per group, for several clients or companies in one course.
elearningfacil.com/pack-fundae-moodle

### Also in the Pack

**Training Evidence: Automatic Alerts** ( `local_efalerts` ) for the student and the tutor (not started, drop-out, final stretch, assessments, certificate deadline); **Training Evidence: Course Ready Check** ( `local_efready` ), which checks the course meets the requirements before it starts; and **Training Evidence: My Progress** ( `block_efprogress` , free), the block where each student sees their time and what is left.

### Class Manager

**Sell courses by seat and rent out classrooms on your Moodle.** Your client enrols their own students from their course; you set the seats and the access period, and each student gets their access by email without anyone sending it by hand.
elearningfacil.com/alquila-moodle-por-aulas-plugin

### Bulk Certificate Manager

**Issue and download a course's certificates in one go** (Workplace and Custom certificate), with filters for who qualifies, and keep a record of delivery.

### Training Evidence: Time Clock (free)

**Measures each student's real active time** in the course. It is the way in: if you install the Pack later, everything measured is kept.

### Find out more

They all work the same way, together or on their own. You can see them, try them and request them at **elearningfacil.com** · **info@elearningfacil.com**.

## 26 Frequently asked questions

| Symptom | Cause / solution |
|---|---|
| I can't see the clock | You are an admin or teacher (excluded), or the scope doesn't include that page. Try it with an enrolled student. |
| Dates are one day off | The site timezone isn't your country's. Set it to your own (for Spain, `Europe/Madrid`). |
| The report says "activities only" but I want the course page too | Change it in the site or course scope; the drop-down reflects the site value. |
| Time doesn't count on an external URL | If it opens in a new window, tick its type for background counting. If you embed it, it counts by focus. |
| The fields don't appear in the report | The custom field (course) or the `dni` field (user) hasn't been created. |
| The student met the condition but the activity isn't completed | It has the completion-by-time lock: it will complete when they reach the configured minutes (⏱ tag in the report). |
| I restored a course and there are no times | The backup was made without "Include enrolled users". Make the backup again with it ticked. |
| "Plugin file integrity" shows Error | Your hosting broke some files during installation: reinstall the plugin from its zip (if it happens again, extract the zip with the file manager) and purge the caches. |
| The clock and the report don't match in BBB | The clock counts live and is reconciled when you change page; both use the same hybrid rule. Check the session sources in the breakdown. |
| Time builds up on the course, not the activity (with Tiles) | The Tiles course format (format_tiles) opens activities in a modal window; turn off modals in the Tiles format's own settings. |
